16 **Fig. S2** Plots showing discharge and average hourly precipitation behaviors of the five storm
 17 events.

18 **Table S1** TP, PP, and TSS concentration-discharge relationships

Item	Storm event	HI_m	Hysteresis pattern	Actual loop size (mg/L)
TP	E	-0.210	Counter-clockwise	-0.066
	F	0.359	Clockwise	0.764
	G	0.146	Clockwise	0.044
	H	NA ^a	Complex	NA
	J	0.140	Clockwise	0.031
PP	E	-0.224	Counter-clockwise	-0.075
	F	0.341	Clockwise	0.703
	G	0.083	Clockwise	0.023
	H	NA	Complex	NA
	J	0.236	Clockwise	0.044
TSS	E	-0.278	Counter-clockwise	-53.395
	F	0.243	Clockwise	434.037
	G	0.079	Clockwise	11.864
	H	NA	Clockwise	NA
	J	0.105	Clockwise	21.966

19 “NA”: Two discharge peaks and relatively complex concentration behavior in storm H hindered the
 20 index calculation

21 HI_m values of clockwise PP responses were greater than the corresponding values of TSS in
 22 each comparison and the trend was reversed when comparing HI_m values of the counter-
 23 clockwise patterns of PP and TSS, indicating concentrated PP delivery in rising sedigraph
 24 limbs compared to falling sedigraph limbs leading to expand the clockwise PP loops and shrink
 25 counter-clockwise loops compared to TSS.
