C_{∞} and k were calculated by the kinetic equation: $C = C_{\infty} \times (1 - e^{-kt})$. Data was presented as mean ± standard deviation (n=3). Different superscript letters in the same row denoted a significant difference according to one-way ANOVA with Tukey's post-hoc test ($p < 0.05$). “*” The significant difference was found between the pulse flour and its paste according to the independent-sample t-test ($p < 0.05$).

Table S3. Representative indicators for factor analysis

	ReGI	ReGL	RS	T-scfa	B-acid	S-pH
Flour						
White kidney bean flour	15.48	39.24	32.65	94.45	13.07	0.25
Adzuki bean flour	14.37	32.45	25.15	81.26	11.53	0.25
Cowpea flour	16.94	48.98	11.28	84.43	11.54	0.50
