

Supplementary Figure 1. Results of Sirius red staining of mouse liver. (A) Sirius red staining results in the WTC group; (B) Sirius red staining results in the APOE C group; (C) Sirius red staining results in the APOE M group; (D) Sirius red staining results in the APOE H group; (E) Quantitative analysis of Sirius red staining results. All were at 20 times magnification and scale = 50 μ m. Data are presented as means \pm SEM, n = 3 per group. Compared with the WTC group, ## p < 0.01. Compared with the APOE C group, ** p < 0.01.
