Figure S1. Flow Chart of Study Participants for Analysis.

Figure S2. Diet Component Definitions Used in the Plant-based Diet Indices.

Figure S3. Dose-Response Relationships between PDI and Cause-Specific Mortality.

Figure S4. Dose-Response Relationships between hPDI and All-Cause and Cause-Specific Mortality.

Figure S5. Associations of PDI with All-Cause and Cause-Specific Mortality Stratified by Potential Risk Factors.

Figure S6. Associations of hPDI with All-Cause and Cause-Specific Mortality Stratified by Potential Risk Factors.

Table S1. Codes Used in the UK Biobank to Identify Death and Relevant Diseases.

Table S2. The original names of covariates in UK Biobank.

Table S3. The percentages of participants with missing covariates.

Table S4. Basic Characteristics of Participants According to Tertiles of healthy Plant-Based Diet Index (hPDI) in the UK Biobank Cohort.

Table S5. Basic Characteristics of Participants According to Tertiles of unhealthy Plant-Based Diet Index (uPDI) in the UK Biobank Cohort.

Table S6. Basic Characteristics of CVD Patients Included and Excluded in the Study.

Table S7. Basic Characteristics of CVD Patients according to Death in the Study.

Table S8. Results of Mediation Analyses between Overall PDI and Blood Biomarkers for All-Cause Mortality.

Table S9. Results of Mediation Analyses between healthy Plant-Based Diet and Blood Biomarkers for All-Cause Mortality.

Table S10. Results of Mediation Analyses between Unhealthy Plant-Based Diet and Blood Biomarkers for All-Cause and Cause-Specific Mortality.

Table S11. Sensitivity Analyses for Multivariable Hazard Ratios (95% CIs) of Mortality According to PDI.

Table S12. Sensitivity Analyses for Multivariable Hazard Ratios (95% CIs) of Mortality According to hPDI.

Table S13. Sensitivity Analyses for Multivariable Hazard Ratios (95% CIs) of Mortality According to uPDI.

Table S14. Sensitivity Analyses for Hazard Ratios (95% CIs) of All-Cause Mortality and Cause-Specific Mortality According to Tertiles of PDI, hPDI, or uPDI based on food intake in “g/d” rather than “serving/d” among Patients with CVD.

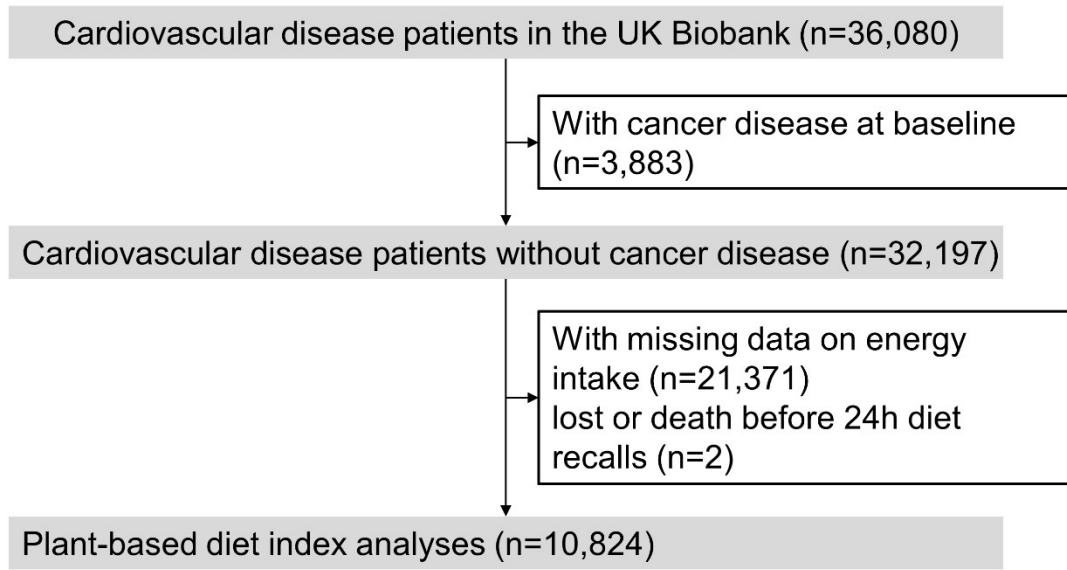

Figure S1. Flow Chart of Study Participants for Analysis.

Plant Food Groups	Items	Standard	Score	PDI	hPDI	uPDI
Whole grains	Porridge, muesli, oat crunch, bran cereal, non-white bread (flour types, brown, wholemeal, other type), whole-wheat cereal, whole meal pasta, brown rice, couscous, other cooked grains (such as bulgur)	quintiles	5	↑	↑	↓
Fruits	Mixed fruit, apple, banana, berries, cherries, grapefruit, grapes, mango, melon, orange, orange-like small fruits, peach/nectarine, pear, pineapple, plum, other fruits, stewed/cooked fruit, prunes, other dried fruit	quintiles	5	↑	↑	↓
Vegetables	Mixed vegetables, vegetable pieces, coleslaw, side salad, beetroot, broccoli, butternut squash, cabbage/kale, carrots, cauliflower, celery, courgette, cucumber, garlic, leeks, lettuce, mushrooms, onion, parsnip, sweet peppers, spinach, sprouts, sweetcorn, sweet potato, fresh tomatoes, cooked or tinned tomatoes, turnip/swede, watercress, other vegetable intake	quintiles	5	↑	↑	↓
Nuts	Salted peanuts, unsalted peanuts, salted nuts, unsalted nuts, seeds	quintiles	5	↑	↑	↓
Legumes	Beans (baked beans), other beans or lentils, broad beans, green beans, peas, tofu	quintiles	5	↑	↑	↓
Vegetable oils	Olive spread on bread/crackers (very low fat, low fat, normal fat, cholesterol-lowering, unknown)	quintiles	5	↑	↑	↓
Tea and coffee	Instant coffee, filtered coffee, cappuccino, latte, espresso, other coffee drinks, standard tea, rooibos tea, green tea, herbal tea, other tea	quintiles	5	↑	↑	↓
Fruit juices	Orange juice, grapefruit juice	quintiles	5	↑	↓	↑
Refined grains	Sweetened cereal, white bread, naan bread, garlic bread, white pasta, white rice	quintiles	5	↑	↓	↑
Potatoes	Fried potatoes, boiled/baked potatoes, mashed potatoes, crisps	quintiles	5	↑	↓	↑
Sugar sweetened beverages	Carbonated (fizzy) drinks, squash or cordial	quintiles	5	↑	↓	↑
Sweets and desserts	Double crust pie, single crust pie/flan, Yorkshire pudding, Danish pastry, fruitcake, cake, doughnuts, sponge pudding, other dessert, chocolate bar, white chocolate, milk chocolate, dark chocolate, chocolate sweet, diet sweets, chocolate-covered biscuits, chocolate biscuits, sweet biscuits, other sweets	quintiles	5	↑	↓	↑
Animal fat	Butter on bread/crackers (spreadable, low fat, normal fat, or unknown type)	quintiles	5	↓	↓	↓
Dairy	Milk, yogurt, ice-cream, low fat hard cheese, hard cheese, soft cheese, blue cheese, low fat cheese spread, cheese spread, cottage cheese, feta cheese, mozzarella cheese, goat's cheese, other cheese	quintiles	5	↓	↓	↓
Egg	Whole eggs, omelettes or scrambled egg, eggs in sandwiches, scotch egg, other egg dishes	quintiles	5	↓	↓	↓
Fish or Seafood	Tinned tuna, oily fish, breaded fish, battered fish, white fish, prawns, lobster/crab, shellfish, other fish intake	quintiles	5	↓	↓	↓
Meat	Sausage, beef, pork, lamb, crumbed or deep-fried poultry, poultry, bacon, ham, liver, other meat intake	quintiles	5	↓	↓	↓
Miscellaneous animal-based foods	Pizza	quintiles	5	↓	↓	↓

Figure S2. Diet Component Definitions Used in the Plant-based Diet Indices.

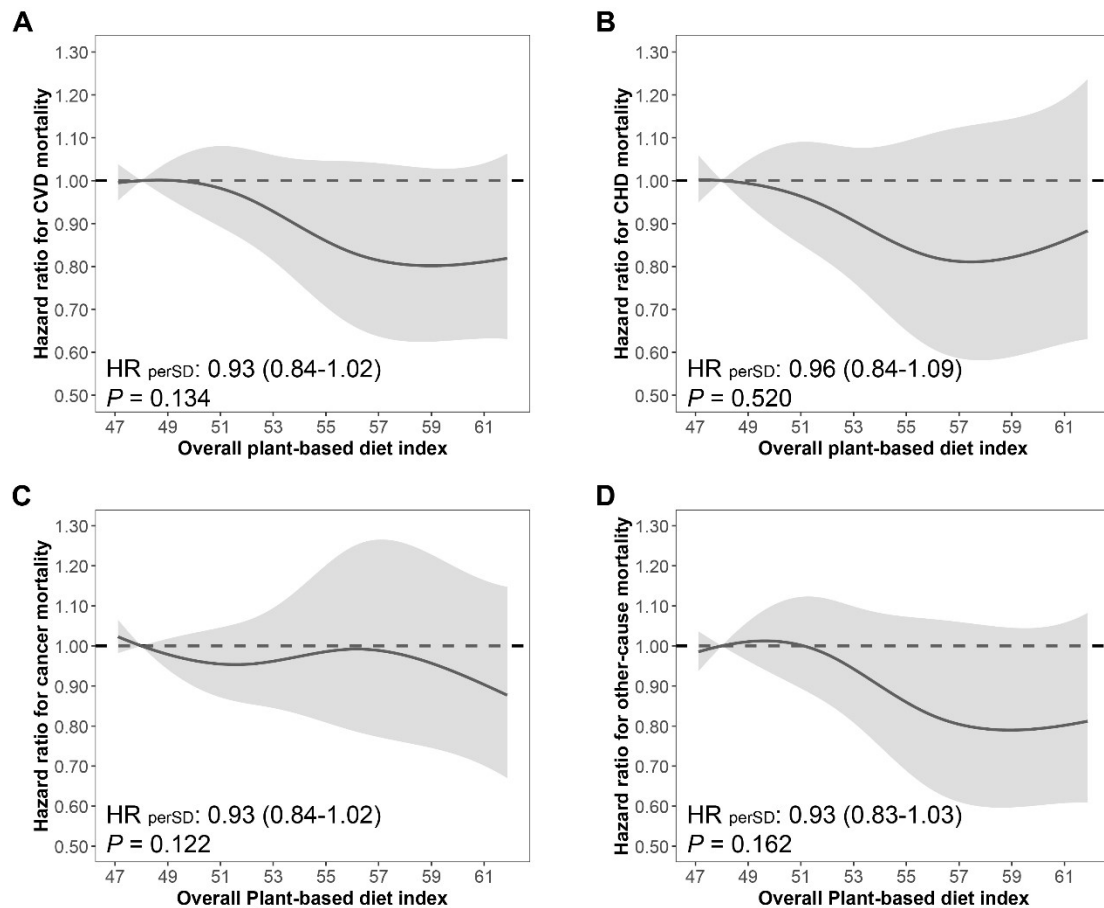

Figure S3. Dose-Response Relationships between PDI and Cause-Specific Mortality. Hazard ratios of CVD mortality (A), CHD mortality (B), cancer mortality (C), and other-cause mortality (D) according to PDI were estimated by restricted cubic spline regressions. The multivariable model was adjusted for age, sex, race, centers, BMI, household income, Townsend deprivation index, total energy intake, smoking status, alcohol consumption, physical activity, history of hypertension, history of hypercholesterolemia, history of diabetes, family history of cardiovascular disease, vitamin supplement use, mineral supplement use, aspirin use, lipid-lowering drug use, and CVD duration. Shaded areas represent 95% confidence intervals.

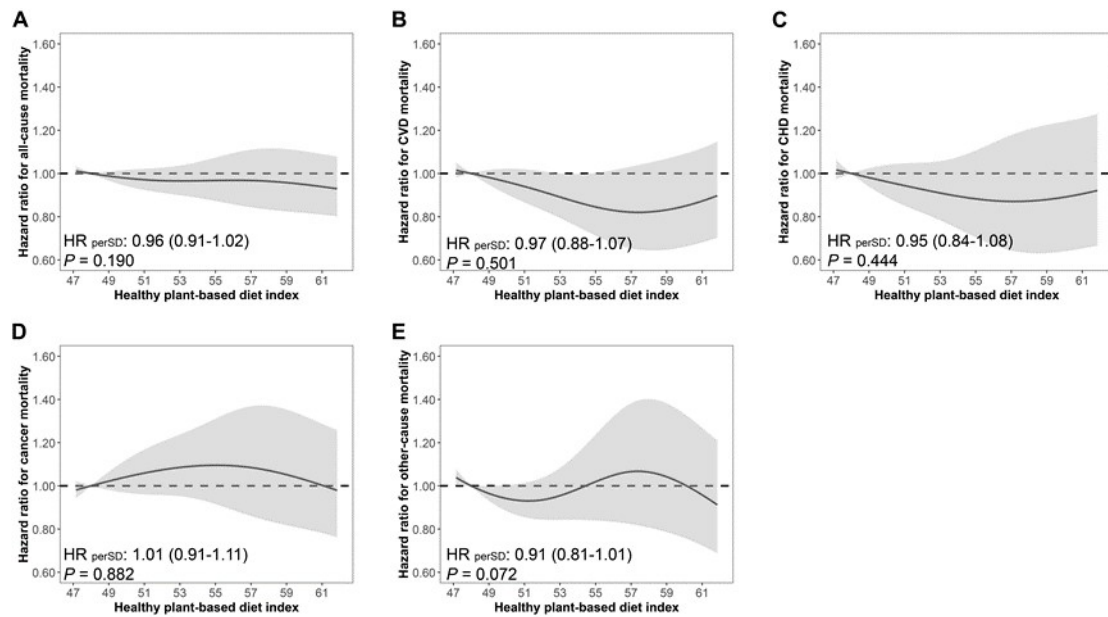

Figure S4. Dose-Response Relationships between hPDI and All-Cause and Cause-Specific Mortality. Hazard ratios of total mortality (A), CVD mortality (B), CHD mortality (C), cancer mortality (D), and other-cause mortality (E) according to hPDI were estimated by restricted cubic spline regressions. The multivariable model was adjusted for age, sex, race, centers, BMI, household income, Townsend deprivation index, total energy intake, smoking status, alcohol consumption, physical activity, history of hypertension, history of hypercholesterolemia, history of diabetes, family history of cardiovascular disease, vitamin supplement use, mineral supplement use, aspirin use, lipid-lowering drug use, and CVD duration. Shaded areas represent 95% confidence intervals.

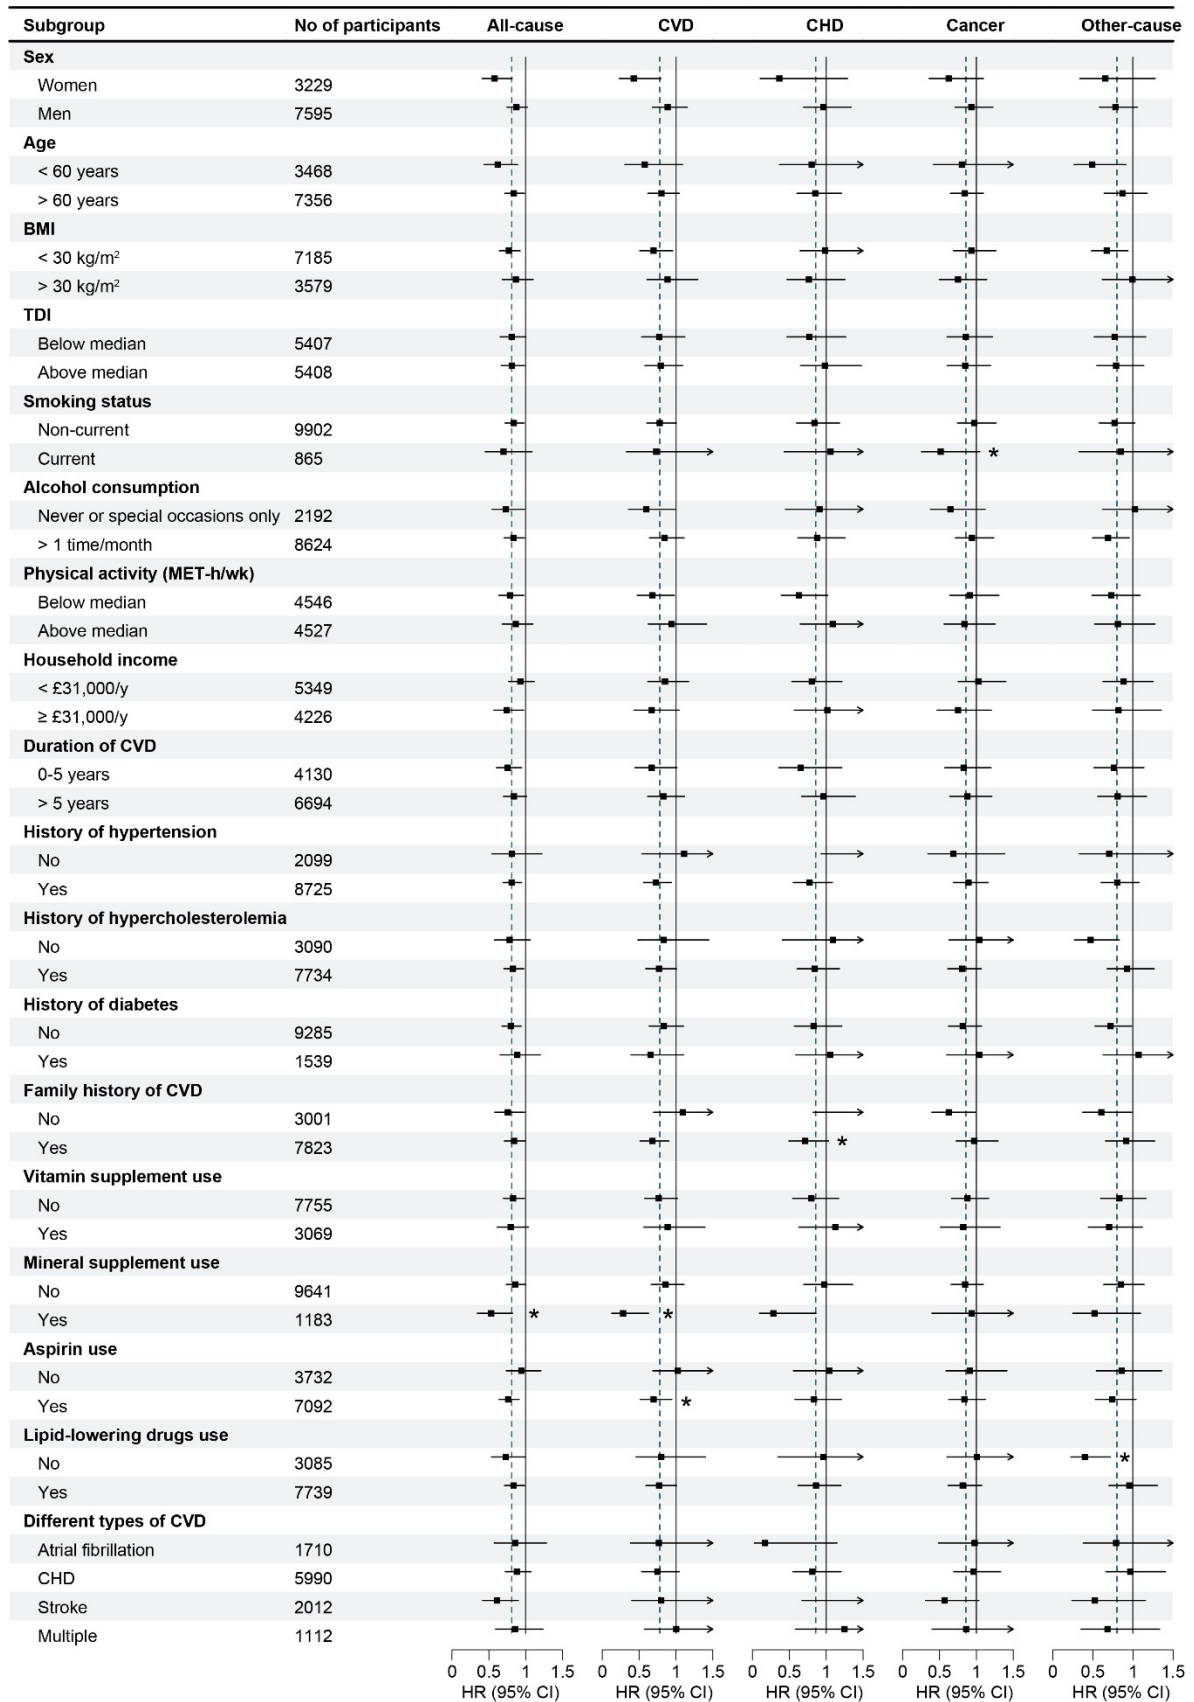

Figure S5. Associations of PDI with All-Cause and Cause-Specific Mortality Stratified by Potential Risk Factors. BMI = body mass index; MET = metabolic equivalent of

task; TDI = Townsend deprivation index. HRs were adjusted for age, sex, race, centers, BMI, household income, Townsend deprivation index, total energy intake, smoking status, alcohol consumption, physical activity, history of hypertension, history of hypercholesterolemia, history of diabetes, family history of cardiovascular disease, vitamin supplement use, mineral supplement use, aspirin use, lipid-lowering drug use and CVD duration. **P* for interaction<0.05.

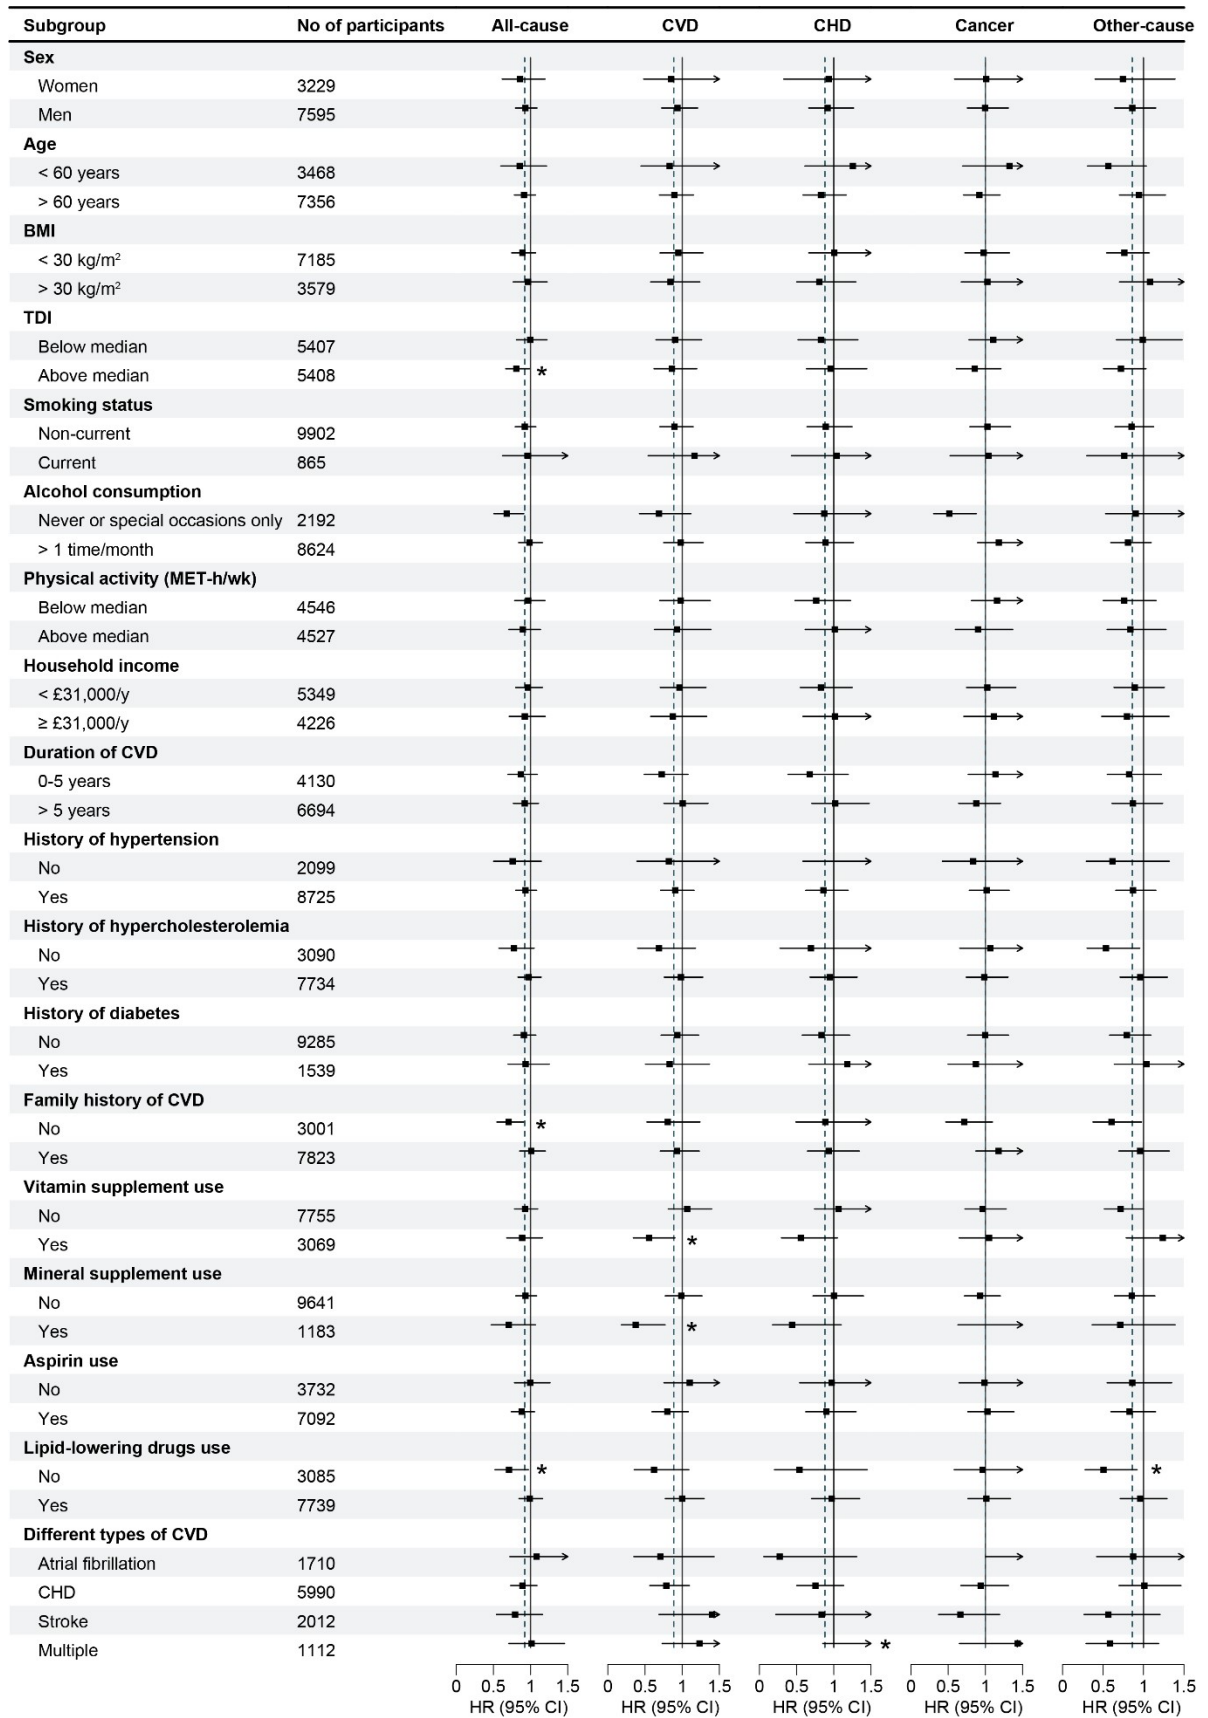

Figure S6. Associations of hPDI with All-Cause and Cause-Specific Mortality Stratified by Potential Risk Factors. BMI = body mass index; MET = metabolic

equivalent of task; TDI = Townsend deprivation index. HRs were adjusted for age, sex, race, centers, BMI, household income, Townsend deprivation index, total energy intake, smoking status, alcohol consumption, physical activity, history of hypertension, history of hypercholesterolemia, history of diabetes, family history of cardiovascular disease, vitamin supplement use, mineral supplement use, aspirin use, lipid-lowering drug use and CVD duration. **P* for interaction<0.05.

Table S1. Codes Used in the UK Biobank to Identify Death and Relevant Diseases.

		ICD-9	ICD-10	OPCS-4	Self-reported fields
	Coronary Heart Disease (CHD)	410, 411, 412, 413, 414	I20-25	K40-K46, K49, K50, K75	6150 (1), 3894, 20004 (1070,1095,1523)
Cardiovascular disease (CVD)	Atrial Fibrillation (AF)	4273	I48	K621, K622, K623	20002 (1471, 1483)
	Stroke	430, 431, 434, 4340, 4341, 4349, 436	I60, I61, I63, I64	A052-A054, L351, L353, L343	6150 (3), 4056, 20002 (1081,1491, 1583, 1086)
CVD death		-	I00-I99	-	-
CHD death			I20-25		
Cancer death		-	C00-C969, D00-D489	-	-

Table S2. The original names of covariates in UK Biobank

Covariates	Filed ID	Source
Age	21003	Age when attended assessment centre
Sex	31	Sex
Race	21000	Ethnic background
Assessment centers	54	UK Biobank assessment centre
BMI	21001	Body mass index (BMI)
Household income	738	Average total household income before tax
TDI	22189	Townsend deprivation index at recruitment
Smoking	20116	Smoking status
Alcohol drinking	1558	Alcohol intake frequency
Physical activity	22037	MET minutes per week for walking;
	22038	MET minutes per week for moderate
	22039	activity; MET minutes per week for vigorous activity
History of hypertension	41271	Diagnoses - ICD9;
	41270	Diagnoses - ICD10;
	2966	Age high blood pressure diagnosed;
	6150	Vascular/heart problems diagnosed by
	4080	doctor;
	4079	Systolic blood pressure, automated
	6153	reading;
	6177	Diastolic blood pressure, automated
	20002	reading; Medication for cholesterol, blood pressure, diabetes, or take exogenous hormones; Medication for cholesterol, blood pressure or diabetes; Non-cancer illness code, self-reported
History of hypercholesterolemia	20002	Non-cancer illness code, self-reported;
	6153	Medication for cholesterol, blood pressure, diabetes, or take exogenous hormones;
	6177	Medication for cholesterol, blood pressure or diabetes;
Family history of CVD	20107	Illnesses of father;
	20110	Illnesses of mother;
	20111	Illnesses of siblings

History of diabetes	41271	Diagnoses - ICD9;
	41270	Diagnoses - ICD10;
	2443	Diabetes diagnosed by doctor;
	2976	Age diabetes diagnosed;
	20003	Treatment/medication code;
	6153	Medication for cholesterol, blood pressure,
	6177	diabetes, or take exogenous hormones;
	20002	Medication for cholesterol, blood pressure or diabetes;
		Non-cancer illness code, self-reported
Vitamin supplementation	6155	Vitamin and mineral supplements
Mineral supplementation	6179	Mineral and other dietary supplements
Aspirin use	6154	Medication for pain relief, constipation, heartburn
Lipid-lowering drugs	20003	Treatment/medication code
Energy intake	26002	Energy
CVD duration	53	Date of attending assessment centre;
	41281	Date of first in-patient diagnosis - ICD9;
	41280	Date of first in-patient diagnosis - ICD10;
	41282	Date of first operative procedure - OPCS4;
	3894	Age heart attack diagnosed;
	4056	Age stroke diagnosed;
	42000	Date of myocardial infarction;
42006	Date of stroke	

Table S3. The percentages of participants with missing covariates.

Covariates	N	%
Ethnicity	46	0.42
BMI	60	0.55
Townsend deprivation index	9	0.08
Household income	1249	11.54
Smoking status	57	0.53
Alcohol consumption	8	0.07
Physical activity (MET-h/wk)	1751	16.18

BMI=body mass index; MET=metabolic equivalent task.

Table S4. Basic Characteristics of Participants According to Tertiles of healthy Plant-Based Diet Index (hPDI) in the UK Biobank Cohort.

Characteristics	Tertiles of hPDI			P value

*Glucose-lowering drugs including oral and insulin.

CI = confidence interval; HR = hazard ratio.

The multivariate model was adjusted for age, sex, race, centers, BMI, household income, Townsend deprivation index, total energy intake, smoking status, alcohol consumption, physical activity, history of hypertension, history of hypercholesterolemia, history of diabetes, family history of cardiovascular disease, vitamin supplement use, mineral supplement use, aspirin use, lipid-lowering drug use and CVD duration.

Table S12. Sensitivity Analyses for Multivariable Hazard Ratios (95% CIs) of Mortality According to hPDI.

	Tertile of healthful plant-based diet index			P for trend

*Glucose-lowering drugs including oral and insulin.

CI = confidence interval; HR = hazard ratio.

The multivariate model was adjusted for age, sex, race, centers, BMI, household income, Townsend deprivation index, total energy intake, smoking status, alcohol consumption, physical activity, history of hypertension, history of hypercholesterolemia, history of diabetes, family history of cardiovascular disease, vitamin supplement use, mineral supplement use, aspirin use, lipid-lowering drug use and CVD duration.

Table S14. Sensitivity Analyses for Hazard Ratios (95% CIs) of All-Cause Mortality and Cause-Specific Mortality According to Tertiles of PDI, hPDI, or uPDI based on food intake in “g/d” rather than “serving/d” among Patients with CVD.
