**Fig. S1.** SEM images a)  $\text{Fe}_3\text{O}_4$  NPs and b)  $\text{Fe}_3\text{O}_4\text{-NH}_3^+$  NPs. Scale bars: 1  $\mu\text{m}$ . And the corresponding local magnification. Scale bars: 300 nm.

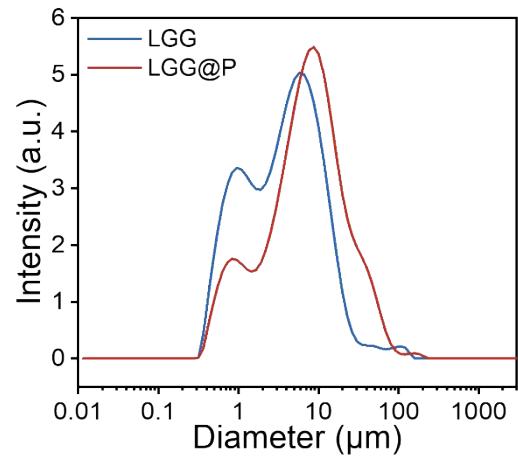

**Fig. S2.** The XPS survey spectra of  $\text{Fe}_3\text{O}_4\text{-NH}_3^+$  NPs with survey scan.

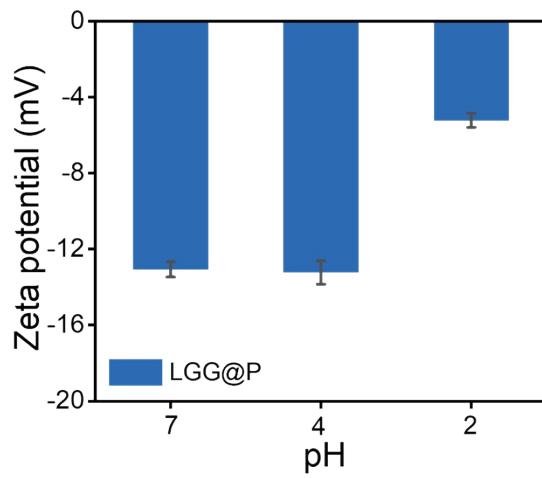

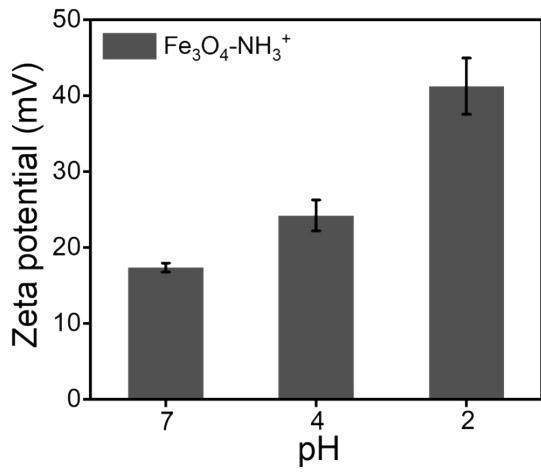

**Fig. S3.** The element distribution and the mass fraction of  $\text{Fe}_3\text{O}_4\text{-NH}_3^+$  NPs with elements of O, Fe, Si. Scale bars:

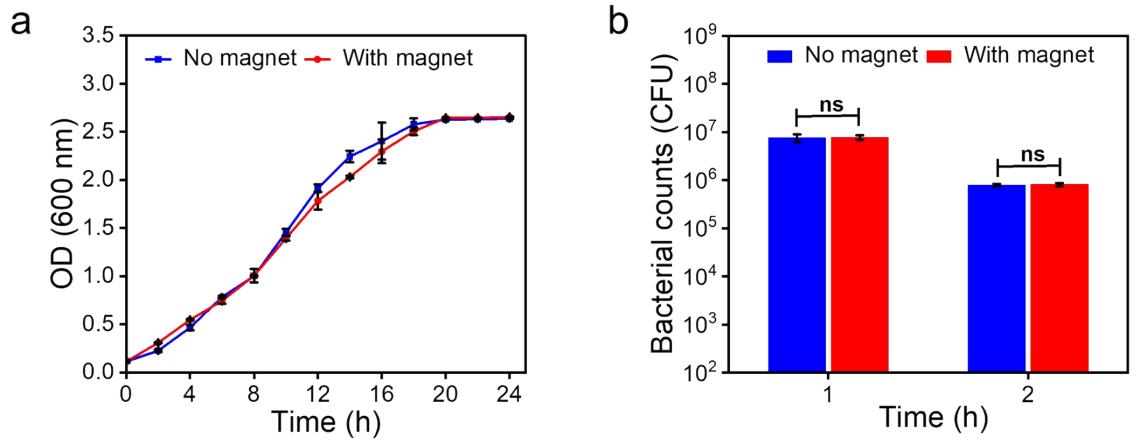

1  $\mu\text{m}$ .

**Fig. S4.** The size changes of LGG before (blue line) and after PDA modification (red line).

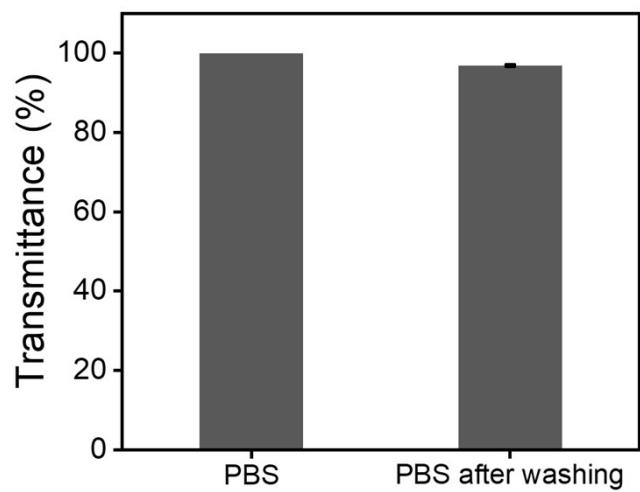

**Fig. S5.** The Zeta potential of (a)  $\text{Fe}_3\text{O}_4\text{-NH}_3^+$  NPs and (b) LGG@P with various pH values treatments for 2 h.

**Fig. S6.** (a) The growth curves of LGG with and without magnet. (b) The bacterial counts of LGG@P@Fe<sub>3</sub>O<sub>4</sub> with and without magnet for different time.

**Fig. S7.** The magnetic field strength of magnet used in in vitro simulation experiment.

**Fig. S8.** The transmittance of PBS before and after washing demonstrated that LGG@P@ $\text{Fe}_3\text{O}_4$  was steadily attracted by a magnet.
