Table S1. Summary of mechanical properties of PTUSx.

| Samples           | Tensile strength<br>(MPa) | Elongation at break<br>(%) | Young's modulus<br>(MPa) | Toughness<br>(MJ m <sup>-3</sup> ) |
|-------------------|---------------------------|----------------------------|--------------------------|------------------------------------|
| PTUS <sub>4</sub> | 0.33                      | 167                        | 1.37                     | 47.17                              |
| PTUS <sub>5</sub> | 0.12                      | 114                        | 0.70                     | 4.54                               |
| PTUS <sub>7</sub> | 2.55                      | 767                        | 3.57                     | 507.05                             |
| PTUS <sub>8</sub> | 12.9                      | 800                        | 26.7                     | 884.6                              |

Table S2. Summary of self-healing and mechanical properties of polyurethane elastomers reported in the literatures.

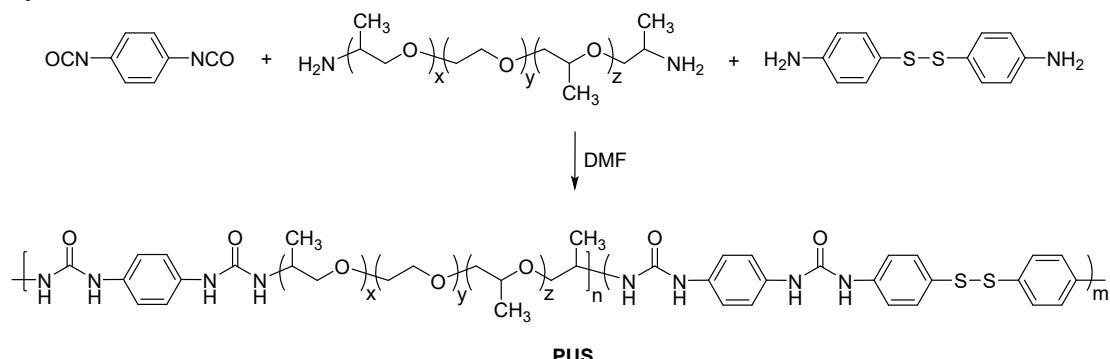

|    | Tensile strength<br>(MPa) | Healing efficiency<br>(%) | Elongation at break<br>(%) | Ref.      |
|----|---------------------------|---------------------------|----------------------------|-----------|
| 1  | 12.9                      | 96 (48h)                  | 800                        | This work |
| 2  | 4.54                      | 59.1 (24h)                | 1586                       | 1         |
| 3  | 0.1                       | 93 (2h)                   | 14000                      | 2         |
| 4  | 0.22                      | 86 (48h)                  | 1880                       | 3         |
| .5 | 24.81                     | 93 (7h)                   | 860                        | 4         |
| 6  | 16                        | 100 (1h)                  | 126                        | 5         |
| 7  | 40                        | 97 (24h)                  | 1072                       | 6         |
| 8  | 0.93                      | 87 (12h)                  | 300                        | 7         |
| 9  | 25                        | 86.4 (6h/70 °C)           | 1600                       | 8         |

Synthesis of PTU:

The synthesis process of PTU: PDIT (384.8 mg, 2.0 mmol) was slowly added to a Jeffamine solution (3.8 g, 2.0 mmol in 5 mL DMF) under N<sub>2</sub> atmosphere. After stirred at 60 °C for 48 h, the mixture was cooled to room temperature and slowly dropped into ice ethyl ether (200 mL). The precipitate was collected and dissolved with dichloromethane (DCM, 50 mL) and then reprecipitated twice in ice ethyl ether. The final product was dried in an oven at 80 °C for 24 h to obtain PTU.

Synthesis of PUS:

The synthesis process of PUS: ADS (745.1 mg, 3.0 mmol) and Jeffamine (1.9 g, 1.0 mmol) were firstly dissolved in acetone (15 mL) in a 100 mL three-necked flask. Next, 1,4-phenylene diisocyanate (640.5 mg, 4.0 mmol) was added to the three-necked flask under N<sub>2</sub> atmosphere. The mixture was stirred at 40 °C for 48 h. Finally, the solution was casted into a teflon mold and volatilized at 60 °C for 24 h. After vacuum drying at 60 °C for 12 h to obtain PUS.
