### List of Figures

S1	Kinetics and particle size evolution for B_Xn_C4 where n= 4 ●, 7 ▲ and 16 ▼. . . . .	4
S2	Kinetics and particle size evolution for F_Xn_C4 where n= 0 ●, 8 ▲, 11 ▼, 13 × and 18 ■. . . . .	5
S3	Kinetics and particle size evolution for F_Xn_C2 where n= 0 ●, 8 ▲, 11 ▼, 13 × and 18 ■. . . . .	6
S4	Kinetics and particle size evolution for F_X13_Cn where n= 0.5 ●, 1 ▲, 2 ▼, and 4 ×. . . . .	7
S5	DSC thermograms for B_Xn_C4. . . . .	8
S6	DSC thermograms for F_Xn_C4. . . . .	9
S7	DSC thermograms for F_Xn_C2. . . . .	10
S8	DSC thermograms for F_X13_Cn. . . . .	10
S9	The molecular weight distributions from conventional SEC analysis for B_Xn_C4 from 10 min ■ to the final sample at 330 min ■. . . . .	12
S10	The molecular weight distributions from conventional SEC analysis for F_Xn_C4 from 10 min ■ to the final sample at 330 min ■. . . . .	13
S11	The molecular weight distributions from conventional SEC analysis for F_Xn_C2 from 10 min ■ to the final sample at 330 min ■. . . . .	14
S12	The molecular weight distributions from conventional SEC analysis for F_X13_Cn from 10 min ■ to the final sample at 330 min ■. . . . .	15
S13	The contact angles of water droplets on the PET substrate after chemical modification for various times at 30 (●) and 60 (▲) °C. The contact angle with no modification is shown at 0 h. . . . .	15
S14	Cylindrical roller bar attachment on an Elcometer 4340 Automatic Film Applicator, which enabled a second sheet of PET to be adhered to the cast films with minimal bubbles. The green arrows show the direction of movement. . . . .	16
S15	A Shimadzu EZ-LX universal testing machine with a 500 N tensile jig in the upper position and a peel rolling jig in the lower position which can hold a custom-made metal holder used for peel adhesion tests. The green arrows show the direction of movement. . . . .	16
S16	Peel adhesion force, $F_{peel}$ as a function of peel distance, stroke for F_Xn_C4 where n = 0 ■, 8 ■, 11 ■, 13 ■ and 18 ■. . . . .	17
S17	Peel adhesion force, $F_{peel}$ as a function of peel distance, stroke for F_Xn_C2 where n = 0 ■, 8 ■, 11 ■, 13 ■ and 18 ■. . . . .	17
S18	Peel adhesion force, $F_{peel}$ as a function of peel distance, stroke for F_X13_Cn where n= 0.5 ■, 1 ■, 2 ■ and 4 ■. . . . .	18
S19	A Shimadzu EZ-LX universal testing machine with 500 N tensile jigs in the upper and lower positions, which held strips of tape connected by a lap joint for shear strength tests. Diagrams are shown within the images to demonstrate the lap joint where the PET is represented the grey outlined shapes and the adhesive is light blue. The green arrows show the direction of movement. . . . .	18
S20	Stress-strain curves to obtain shear strength, $W_{shear}$ , as the area under the curves for F_Xn_C4 where n = 0 ■, 8 ■, 11 ■, 13 ■ and 18 ■. . . . .	19
S21	Stress-strain curves to obtain shear strength, $W_{shear}$ , as the area under the curves for F_Xn_C2 where n = 0 ■, 8 ■, 11 ■, 13 ■ and 18 ■. . . . .	19
S22	Stress-strain curves to obtain shear strength, $W_{shear}$ , as the area under the curves for F_X13_Cn where n= 0.5 ■, 1 ■, 2 ■ and 4 ■. . . . .	19
S23	Stress-strain curves to obtain tack adhesion energy, $W_{adh}$ , as the area under the curves for B_Xn_C4 where n = 4 ■, 7 ■, 16 ■. . . . .	20
S24	Stress-strain curves to obtain tack adhesion energy, $W_{adh}$ , as the area under the curves for F_Xn_C4 where n = 0 ■, 8 ■, 11 ■, 13 ■ and 18 ■. . . . .	21

S25	Stress-strain curves to obtain tack adhesion energy, $W_{adh}$ , as the area under the curves for F_Xn_C2 where n = 0 ■, 8 ■, 11 ■, 13 ■ and 18 ■. . . . .	21
S26	Stress-strain curves to obtain tack adhesion energy, $W_{adh}$ , as the area under the curves for F_X13_Cn where n = 0.5 ■, 1 ■, 2 ■ and 4 ■. . . . .	21
S27	Amplitude sweeps with the storage modulus, $G'$ ■, and loss modulus, $G''$ ■, for F_Xn_C4 where n = 0 ●, 8 ▲, 11 ▼, 13 × and 18 ■. The verticle black line shows the displacement used in the frequency sweeps to remain in the linear viscoelastic regime. . . . .	22
S28	Amplitude sweeps with the storage modulus, $G'$ ■, and loss modulus, $G''$ ■, for F_Xn_C2 where n = 0 ●, 8 ▲, 11 ▼, 13 × and 18 ■. The verticle black line shows the displacement used in the frequency sweeps to remain in the linear viscoelastic regime. . . . .	22
S29	Amplitude sweeps with the storage modulus, $G'$ ■, and loss modulus, $G''$ ■, for F_X13_Cn where n = 0.5 ●, 1 ▲, 2 ▼, and 4 ×. The verticle black line shows the displacement used in the frequency sweeps to remain in the linear viscoelastic regime. . . . .	22
S30	Rheological frequency sweeps of F_Xn_C4 where n = 0 ●, 8 ▲, 11 ▼, 13 × and 18 ■. . . . .	23
S31	Rheological frequency sweeps of F_Xn_C2 where n = 0 ●, 8 ▲, 11 ▼, 13 × and 18 ■. . . . .	24
S32	Rheological frequency sweeps of F_X13_Cn where n = 0.5 ●, 1 ▲, 2 ▼, and 4 ×. . . . .	25
S33	The final molecular weight distributions from conventional SEC analysis for F_Xn_C4, where n = 0 ■, 8 ■, 11 ■, 13 ■ and 18 ■ where the surfactant molecular weight distributions for Brij L23 (- -) and Lakeland PAE 136 (- - -) are also shown. . . . .	26

## List of Tables

S1	Monomer compositions for each latex synthesized. The mole percentage quoted relates to the number of molecules and not the number of vinyl groups. . . . .	2
S2	Recipes for each latex synthesized. . . . .	3
S3	Glass transition temperature, $T_g$ , analyses for all latexes synthesized. . . . .	11
S4	Average film heights during tack testing (average of 5 repeats) and rheological amplitude and frequency sweeps (average during the measurement). . . . .	20

Table S1: Monomer compositions for each latex synthesized. The mole percentage quoted relates to the number of molecules and not the number of vinyl groups.

Figure S24: Stress-strain curves to obtain tack adhesion energy,  $W_{adh}$ , as the area under the curves for F\_Xn\_C4 where n = 0 ■, 8 ■, 11 ■, 13 ■ and 18 ■.

Figure S25: Stress-strain curves to obtain tack adhesion energy,  $W_{adh}$ , as the area under the curves for F\_Xn\_C2 where n = 0 ■, 8 ■, 11 ■, 13 ■ and 18 ■.

Figure S26: Stress-strain curves to obtain tack adhesion energy,  $W_{adh}$ , as the area under the curves for F\_X13\_Cn where n = 0.5 ■, 1 ■, 2 ■ and 4 ■.

Figure S27: Amplitude sweeps with the storage modulus,  $G'$  ■, and loss modulus,  $G''$  ■, for F\_Xn\_C4 where  $n=0$  ●, 8 ▲, 11 ▼, 13 × and 18 ■. The vertical black line shows the displacement used in the frequency sweeps to remain in the linear viscoelastic regime.

Figure S28: Amplitude sweeps with the storage modulus,  $G'$  ■, and loss modulus,  $G''$  ■, for F\_Xn\_C2 where  $n=0$  ●, 8 ▲, 11 ▼, 13 × and 18 ■. The vertical black line shows the displacement used in the frequency sweeps to remain in the linear viscoelastic regime.

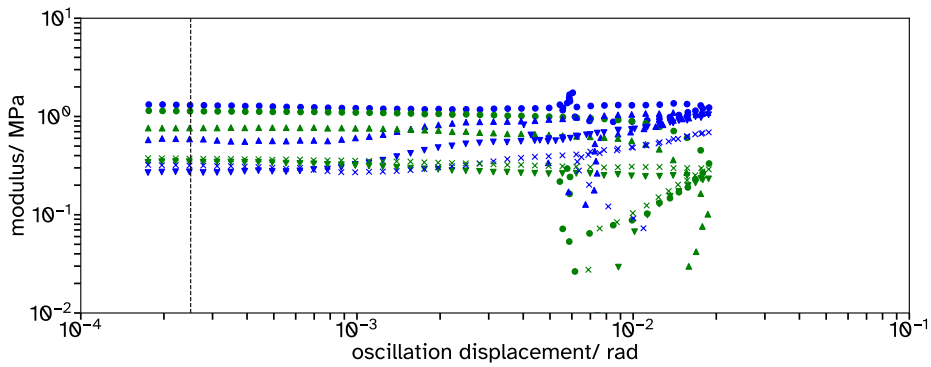

Figure S29: Amplitude sweeps with the storage modulus,  $G'$  ■, and loss modulus,  $G''$  ■, for F\_X13\_Cn where  $n=0.5$  ●, 1 ▲, 2 ▼, and 4 ×. The vertical black line shows the displacement used in the frequency sweeps to remain in the linear viscoelastic regime.
