Table S1. Monomers ratio in synthesized coPIs calculated from ^{1}H NMR spectra.

Sample	Theoretical	NMR calculated
	ODPA:BIS P:DAP	
DAP-0.5	1:0.5:0.5	1:0.53:0.47
DAP-0.3	1:0.7:0.3	1:0.7:0.3
DAP-0.2	1:0.8:0.2	1:0.78:0.22

**Figure S1**. FTIR spectra of coPIs
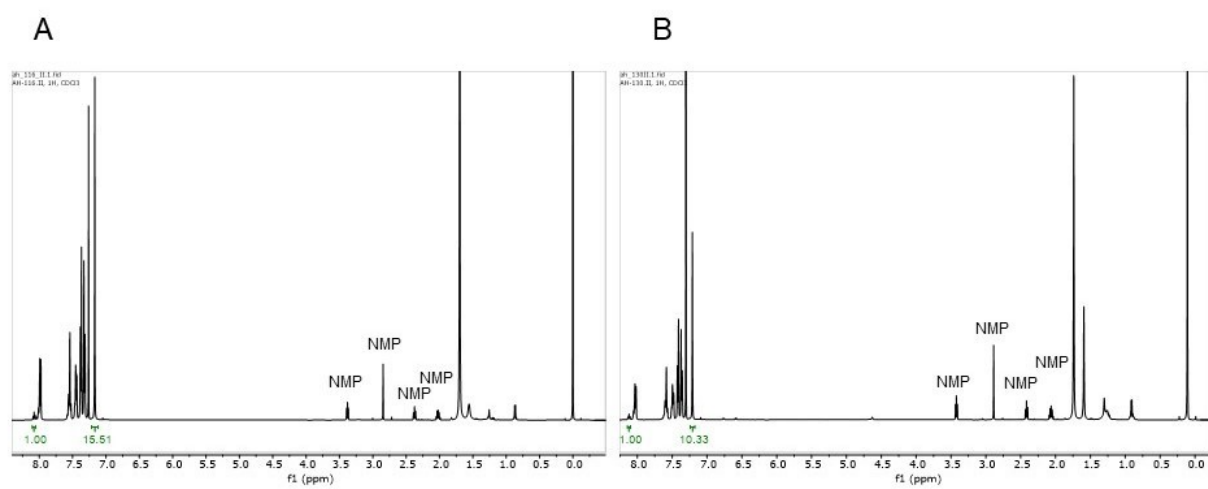

Figure S2. FTIR spectra of coPI-Qs

**Figure S3**. NMR spectra of coPIs: DAP-0.2 (A), DAP-0.3 (B)

Figure S4. NMR spectra of coPI-Qs: DAP-0.2Q (A), DAP-0.3Q (B), DAP-0.2Q2-(C), DAP-0.3Q2 (D)

SEC Measurements

Molar mass and its distribution was determined using Waters SEC-RI chromatograph (Waters 515 pump, Waters 2414 refractive index detector, ECOM 4 channel degasser). Separation of polymers (~2 mg/ml solution in chloroform) was done at 25°C on Phenogel 5 μm linear column (7.8x300 mm) using chloroform (HPLC grade, stabilized by amylene) as mobile phase (1 ml/min). Evaluation of data was done in Clarity 6.0 GPC software using conventional calibration based on narrow polystyrene standards (580 – 1233000 g/mol) providing apparent molar mass values (polystyrene equivalents).

Table S2. Molar mass characteristics of PI and *co*PIs

Sample	M_n, g/mol	M_w, g/mol	Đ
DAP-0.5	22 100	522 000	23.6
DAP-0.3	10 900	32 700	3.0
DAP-0.2	45 100	93 400	2.1
DAP-0	38 900	89 600	2.3
