## Supplementary information

Gd<sub>2.2</sub>Y<sub>0.8</sub>

Gd<sub>2.5</sub>Y<sub>0.5</sub>

Gd<sub>2.8</sub>Y<sub>0.2</sub>

Gd<sub>3</sub>Y<sub>0</sub>

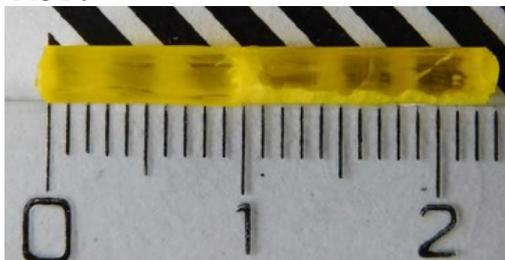

Figure S1: Photographs of GYSAG:Ce set grown by the  $\mu$ -PD crystal grown method.

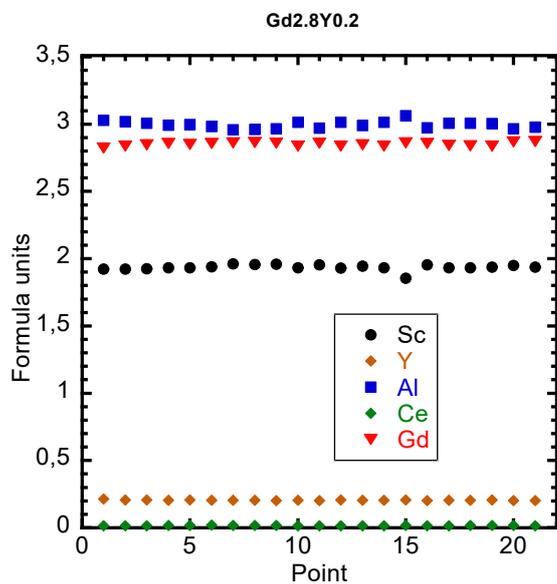

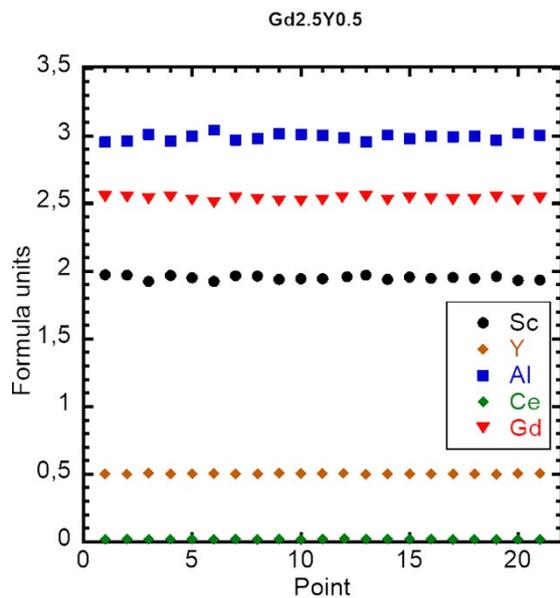

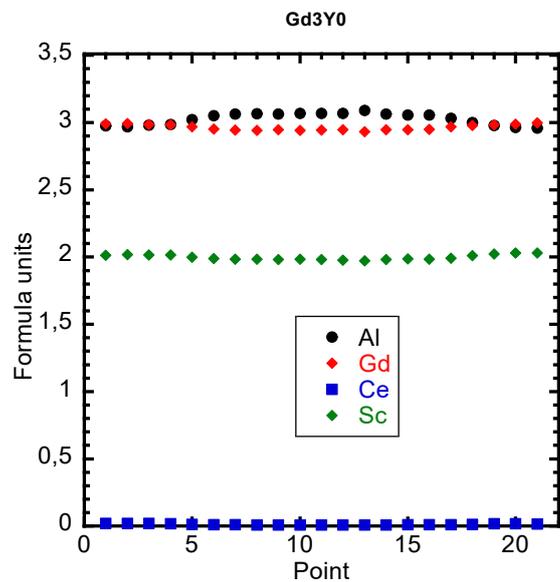

Figure S2: EPMA analysis of Gd2.5Y0.5, Gd2.8Y0.2 and Gd3Y0.

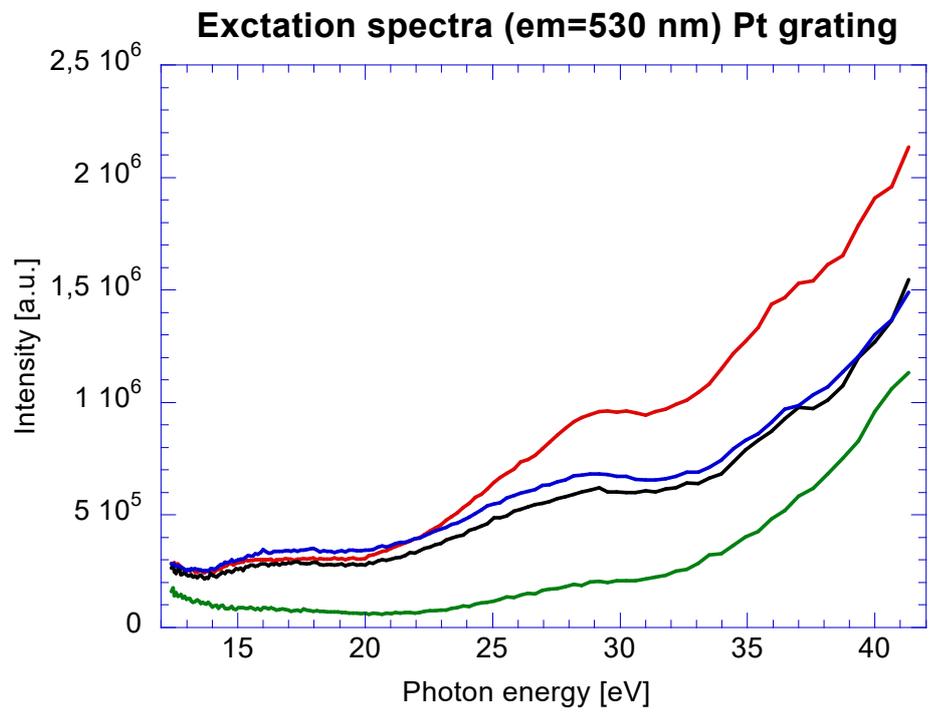

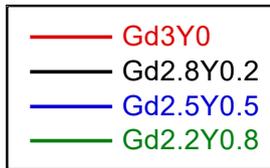

Figure S3: PLE (em= 530 nm) spectra for GYSAG series over 12.4 eV nm using Pt grating.

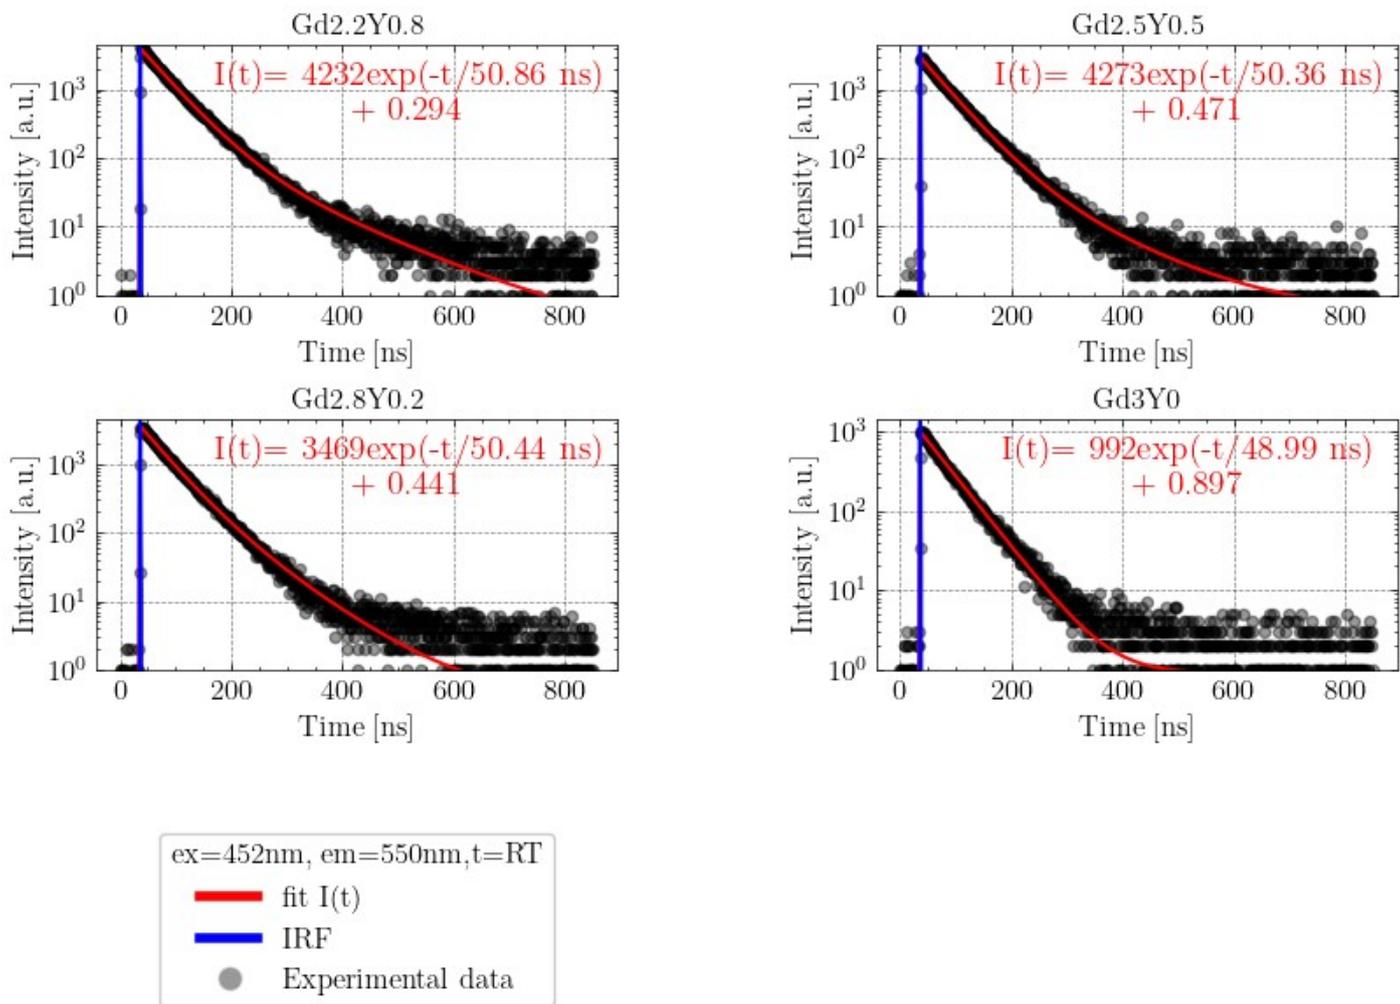

Figure S4: PL decay curves of GYSAG:Ce set under nanoLED-pulse excitation at RT ( $\text{exc}=452 \text{ nm}$ ,  $\text{em}=550 \text{ nm}$ ). The fit (red line) is a convolution of the instrumental response and function  $I(t)$  in the figure.

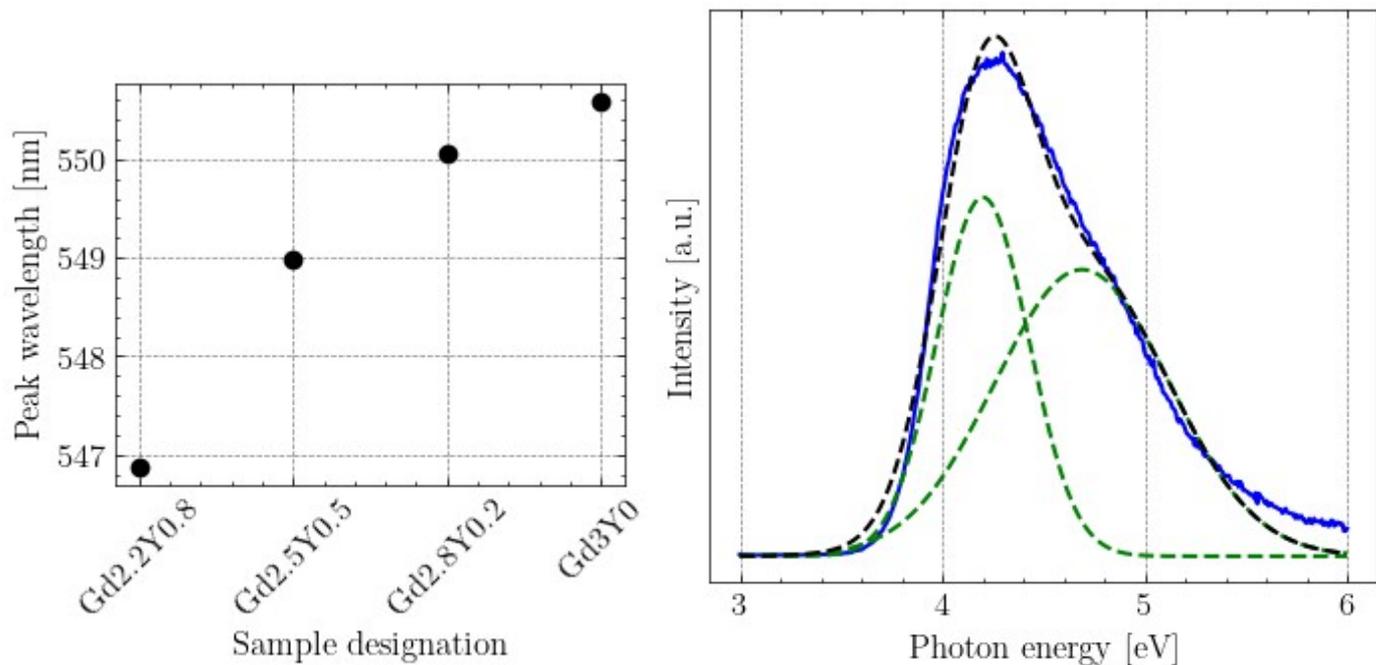

Figure S5: a) Peak position from RL of  $5d_1-4f_{1,2}$  transition of  $\text{Ce}^{3+}$ . b) Example of fit of doublet peak with two Gaussian functions (green), sum (black), and (blue) raw data for Gd<sub>3</sub>Y<sub>0</sub>.
