

Supporting Information (SI)

† Electronic Supporting Information (ESI) available: ¹H-NMR spectra, additional figures, Schemes and Tables

Fig. S1 ¹H NMR Spectra of 1-amino-4-hydroxy-9,10-anthraquinone.

Fig. S2 ^1H NMR Spectra of the copper complex of 1-amino-4-hydroxy-9,10-anthraquinone.

Fig. S3 Mass spectra of the copper complex of 1-amino-4-hydroxy-9,10-anthraquinone.

Fig. S4 The theoretical vibrational spectra of copper complex.

Fig. S5 The experimental vibrational spectra of copper complex.

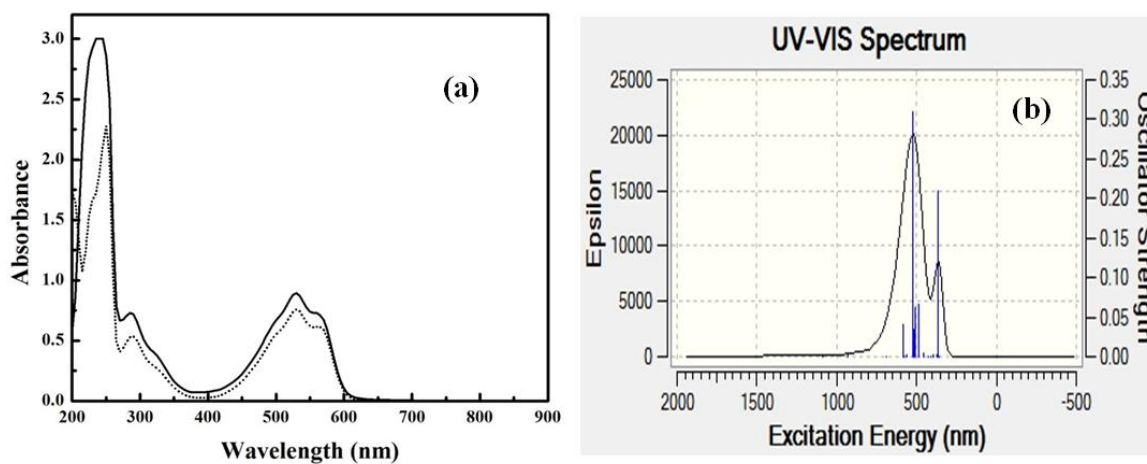

Fig. S6 (a) The UV-Vis spectra of 1-amino-4-hydroxy-9,10-anthraquinone (dotted line) and its copper complex (bold line) in 30% ethanol solution. **(b)** Theoretical UV-Vis spectrum of copper complex.

Fig. S7 Plot of the cathodic peak current (I_{pc}) with the square root of the scan rate (\sqrt{v}) for both the first (o) and second (•) one-electron reductions of the copper complex in anhydrous dimethyl formamide. $[\text{CuQ}_2] = 10^{-3} \text{ M}$, $[\text{TBAB}] = 10^{-3} \text{ M}$ and temperature = 25°C .

Fig. S8 Plot of the cathodic peak current (I_{pc}) with the square root of the scan rate (\sqrt{v}) for the reduction of the copper complex in 20% dimethyl formamide. $[\text{CuQ}_2] = 5 \times 10^{-5}$ M, $[\text{TBAB}] = 10^{-3}$ M and temperature = 25°C .

Fig. S9 The plot of the ratio of anodic to cathodic peak current (I_{pa}/I_{pc}) with the logarithm of scan rate (Vs^{-1}) for the reduction of the copper complex in 20% DMF solution.

Scheme-S1 Electrochemical reduction of 1-amino-4-hydroxy-9,10-anthraquinone in anhydrous dimethyl formamide.

Table-S1: Comparison of theoretical and experimental IR stretching frequency of the copper complex.
