Figure S1. Autoradiogram of native 2D-PAGE of soluble protein extract of *E. coli*. Extracts were obtained from cells grown in (A) 6 µM Fe and in (B) 40 µM Fe (575 µg protein). The protein identities for the different spots are given in tables S1 and S2.

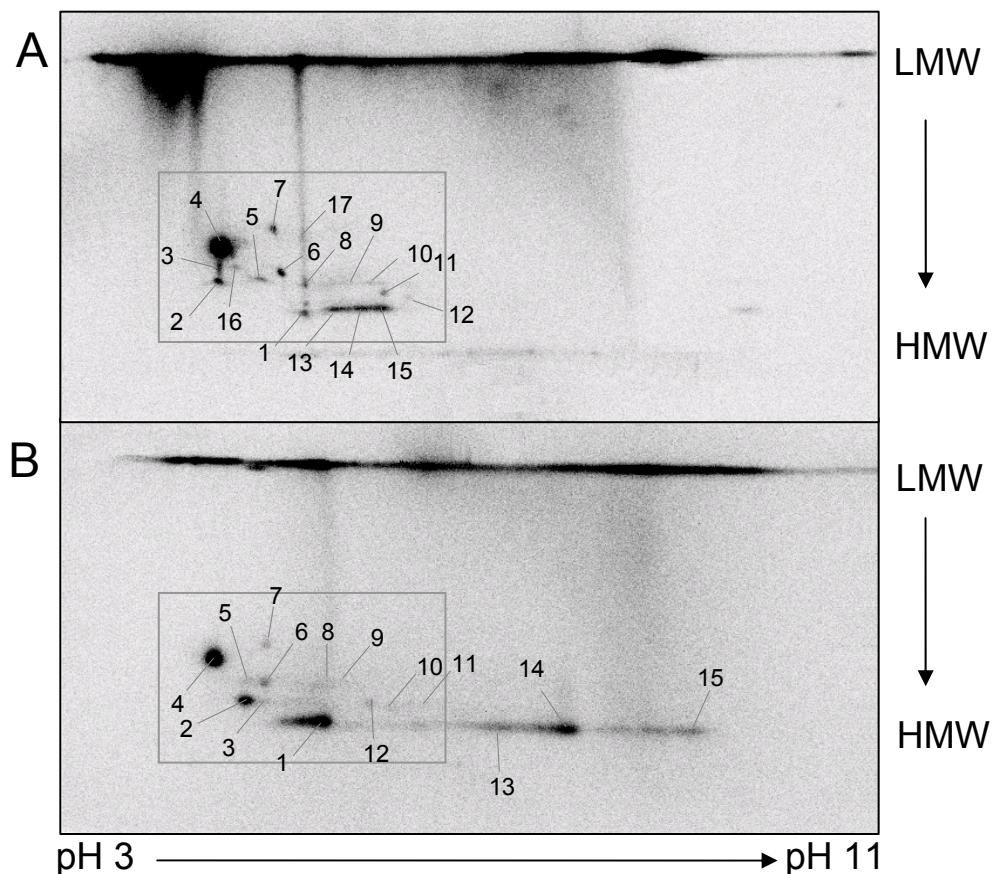

Table S1 Protein identification by LC MS/MS after native–native 2D–PAGE separation of *E. coli* soluble protein extract obtained from growth in LB medium containing 6 µM Fe.

Spot #	Gene ^a	Protein	Mascot protein score ^b	emPAI ^c	Unique peptides
1	Ftn	Ferritin	733	6.31	9
	NmpC	Outer membrane porin protein nmpC precursor	250	0.56	5

^aGenes from Database *E. coli* K12 genome (www.ecocyc.com); ^bMascot identity threshold p<0.05. Spot numbers correspond to numbered positions in Fig. 1A; ^cemPAI is a measure for the relative abundance of proteins in a spot; ^dThree unique peptides that were detected occur in both FumA and FumB and cannot be unambiguously assigned to either one of them. They have now been assigned to both FumA and FumB.

The position of spot number is indicated in Fig. S1A. This table contains just proteins with number of unique peptides ≥ 2 .

Table S2 Protein identification by LC MS/MS after native–native 2D–PAGE separation of *E. coli* soluble protein extract obtained from growth in LB medium containing 40 µM Fe.

Spot #	Gene ^a	Protein	Mascot protein score ^b	emPAI ^c	Unique peptides

^aGenes from Database *E. coli* K12 genome (www.ecocyc.com); ^bMascot identity threshold p<0.05. Spot numbers correspond to numbered positions in Fig. 1A; ^cemPAI is a measure for the relative abundance of proteins in a spot; ^dUnique peptides that were detected occur in both FumA and FumB and cannot be unambiguously assigned to either one of them. They have now been assigned to both FumA and FumB.

The position of spot number is indicated in Fig. S1B. This table contains just proteins with number of unique peptides ≥ 2 .

Figure S2 Coomassie brilliant blue (CBB) stained gels of native–native 2D-PAGE of soluble protein extract (μg protein) obtained from *E. coli* (575 μg) after growth on high iron. **A** without DNase; **B** with 0.1 mg/L DNase and 0.1 mg/L RNase.

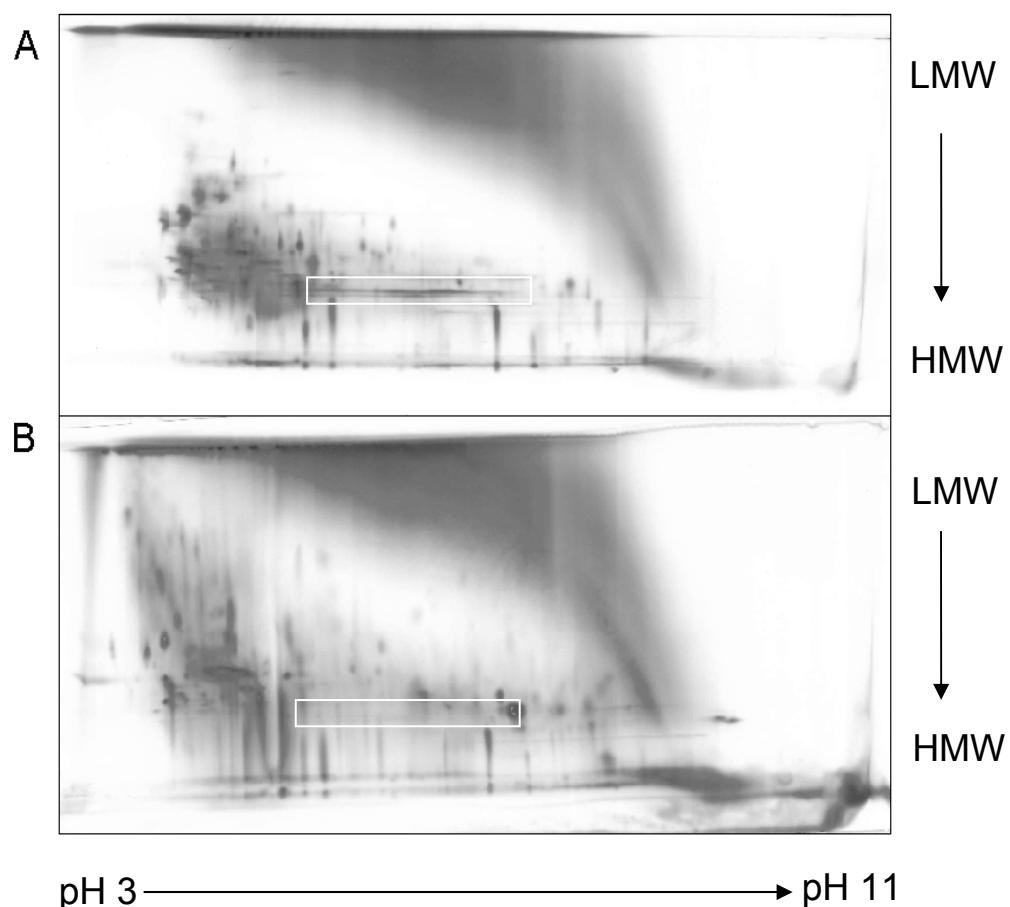

Figure S3 Autoradiogram of native 2D-PAGE of soluble protein extract of *E. coli* grown on 0.24 mM ^{69m}Zn . The spot positions are indicated with numbers.

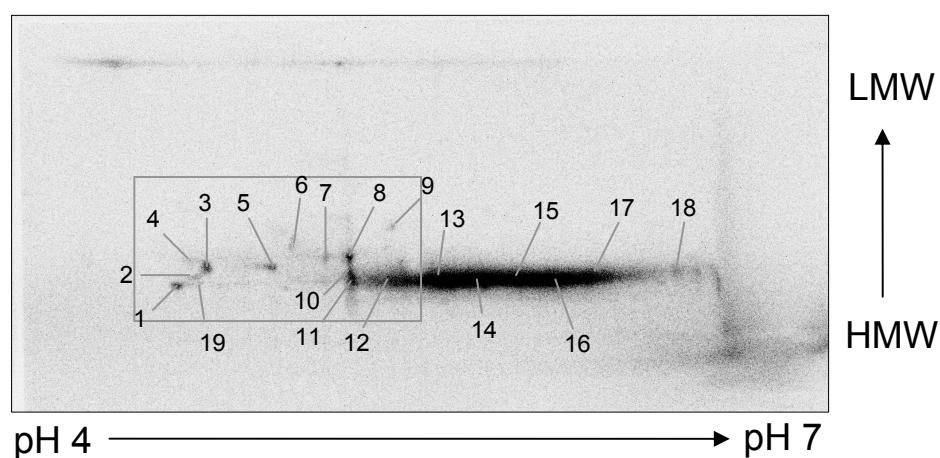

Table S3 Protein identification by LC MS/MS after native–native 2D–PAGE separation of *E. coli* soluble protein extract obtained from growth in LB medium containing 0.24 mM $^{69m}\text{ZnCl}_2$. The predicted Zn-containing proteins according to the gene ontology database of *E. coli* (www.ecocyc.org) are in bold.
