**Table** Solution polymerization data for *rac*-LA, *L*-LA and CL using **1–9** in 200:1 ratio at 80  $^{\circ}$ C

<sup>*a*</sup>Time of polymerization measured by quenching the polymerization reaction when all monomer was found consumed. <sup>*b*</sup>Measured by GPC at 27 °C in THF relative to polystyrene standards with Mark-Houwink corrections for  $M_n$  for LA polymerization. <sup>*c*</sup> $M_n$  (theoretical) at 100 % conversion =  $[M]_o/[C]_o \times \text{mol wt (monomer)} + M_{end groups}$  <sup>*d*</sup>Calculated from homonuclear decoupled <sup>1</sup>H NMR spectrum.

| Entry | Initiator | Monomer | Yield | Time <sup>a</sup> / | $^{b}M_{n}^{obs}/$  | $^{c}M_{\rm n}^{\rm theo}/$ | $M_{\rm w}/M_{\rm n}$ | $P_{\rm r}^{\ d}$ |
|-------|-----------|---------|-------|---------------------|---------------------|-----------------------------|-----------------------|-------------------|
|       |           |         | (%)   | min                 | kgmol <sup>-1</sup> | kgmol <sup>-1</sup>         |                       |                   |

**Table** Solution polymerization data for *rac*-LA, *L*-LA and CL using **1–9** in the presence of benzyl alcohol in 200:1:5 ratio at 80  $^{\circ}$ C

<sup>*a*</sup>Time of polymerization measured by quenching the polymerization reaction when all monomer was found consumed. <sup>*b*</sup>Measured by GPC at 27 °C in THF relative to polystyrene standards with Mark-Houwink corrections for  $M_n$  for LA polymerization. <sup>*c*</sup>Mn (theoretical) at 100 % conversion = [M]o/[C]o × mol wt (monomer) + 108.14. <sup>*d*</sup>Calculated from homonuclear decoupled <sup>1</sup>H NMR spectrum.

| Entry | Initiator | [M]/[C] | Time <sup>a</sup> /min | Yield (%) | $M_{\rm n}^{\ b}/$  | $M_{\rm w}/M_{\rm n}$ |
|-------|-----------|---------|------------------------|-----------|---------------------|-----------------------|
