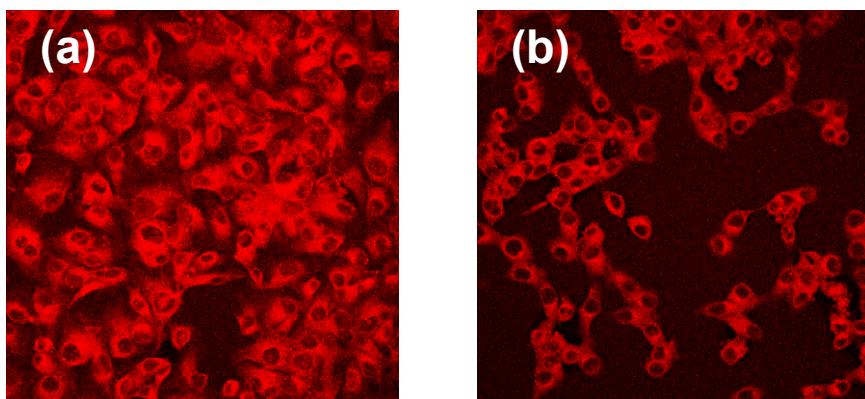

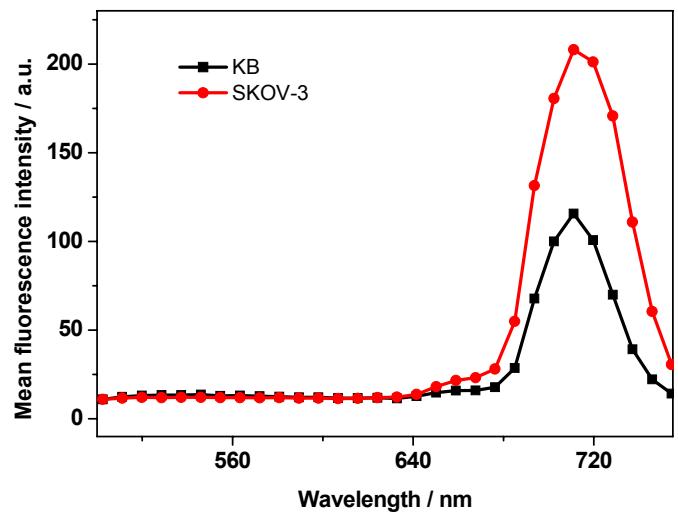

Fig 1 Fluorescence spectra and corresponding confocal fluorescence images (650-730 nm detection) obtained from fixed HER2-positive SKOV-3 cells (a) and HER2-negative KB cells incubated with C6.5-VP.

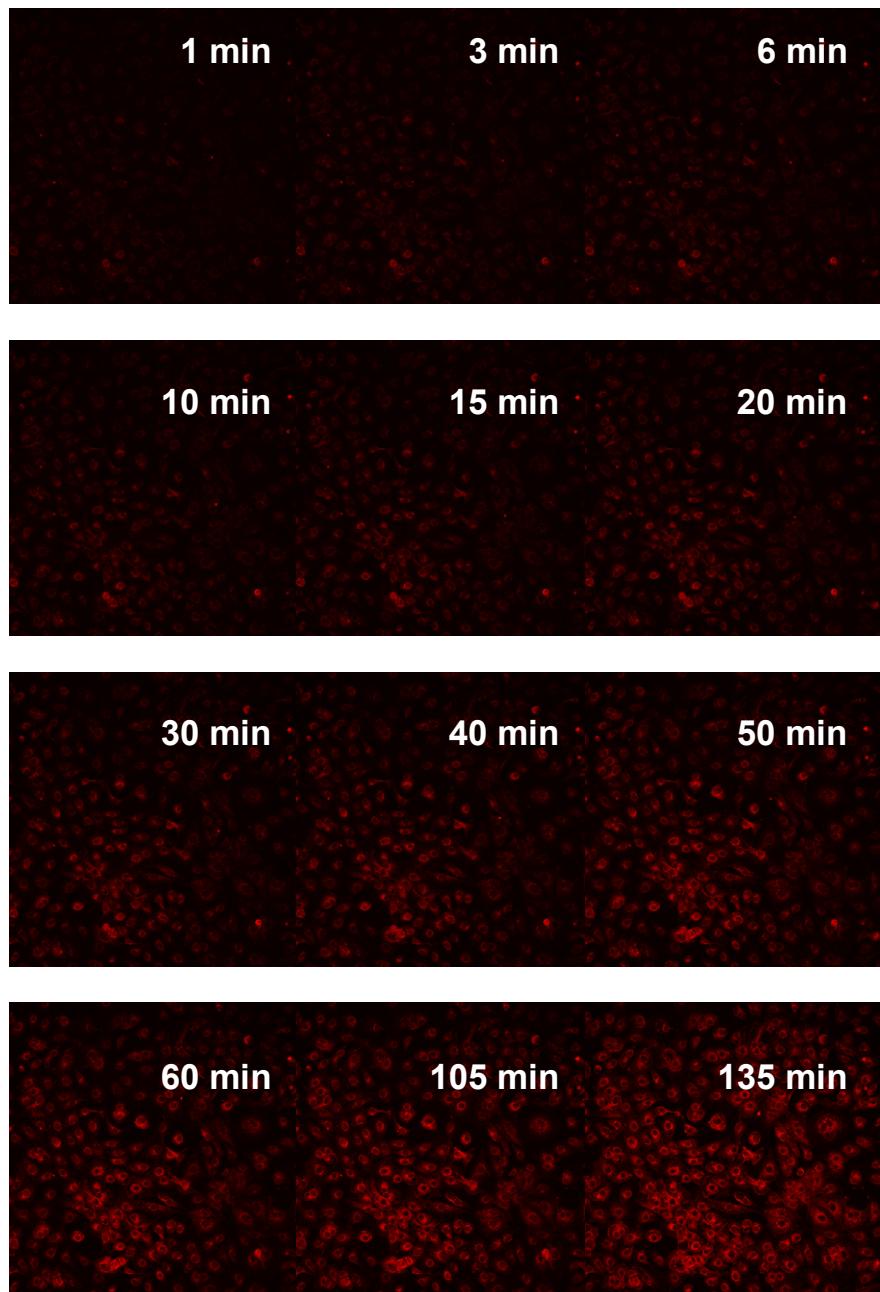

Fig 2 A series of confocal fluorescence images recorded for SKOV-3 cells at different time points during incubation with 1 μ M solution of free verteporfin (VP) in culture medium.

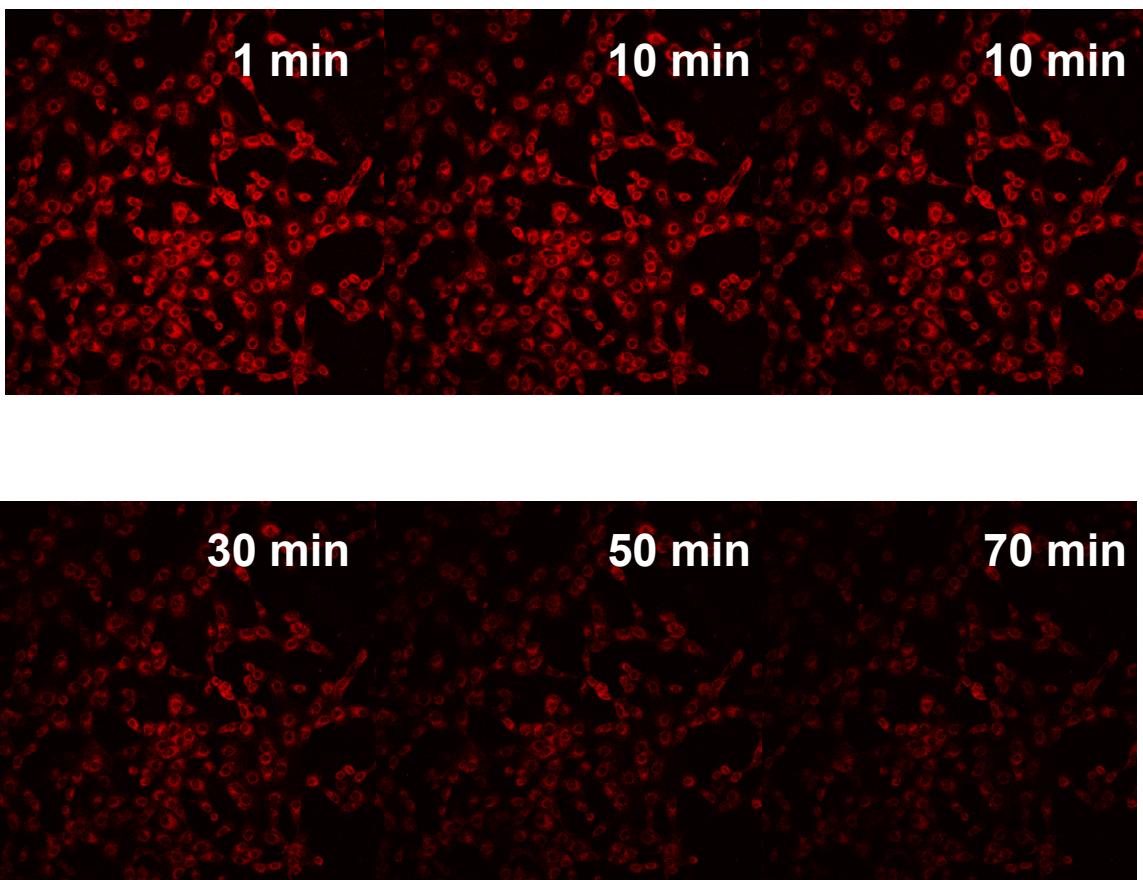

Fig. 3 A series of confocal fluorescence images recorded for SKOV-3 cells at different time points following replacement of 1 μ M solution of free verteporfin (VP) in culture medium with blank culture medium. Prior to washing and medium change the cells were incubated with VP for 2.5h.

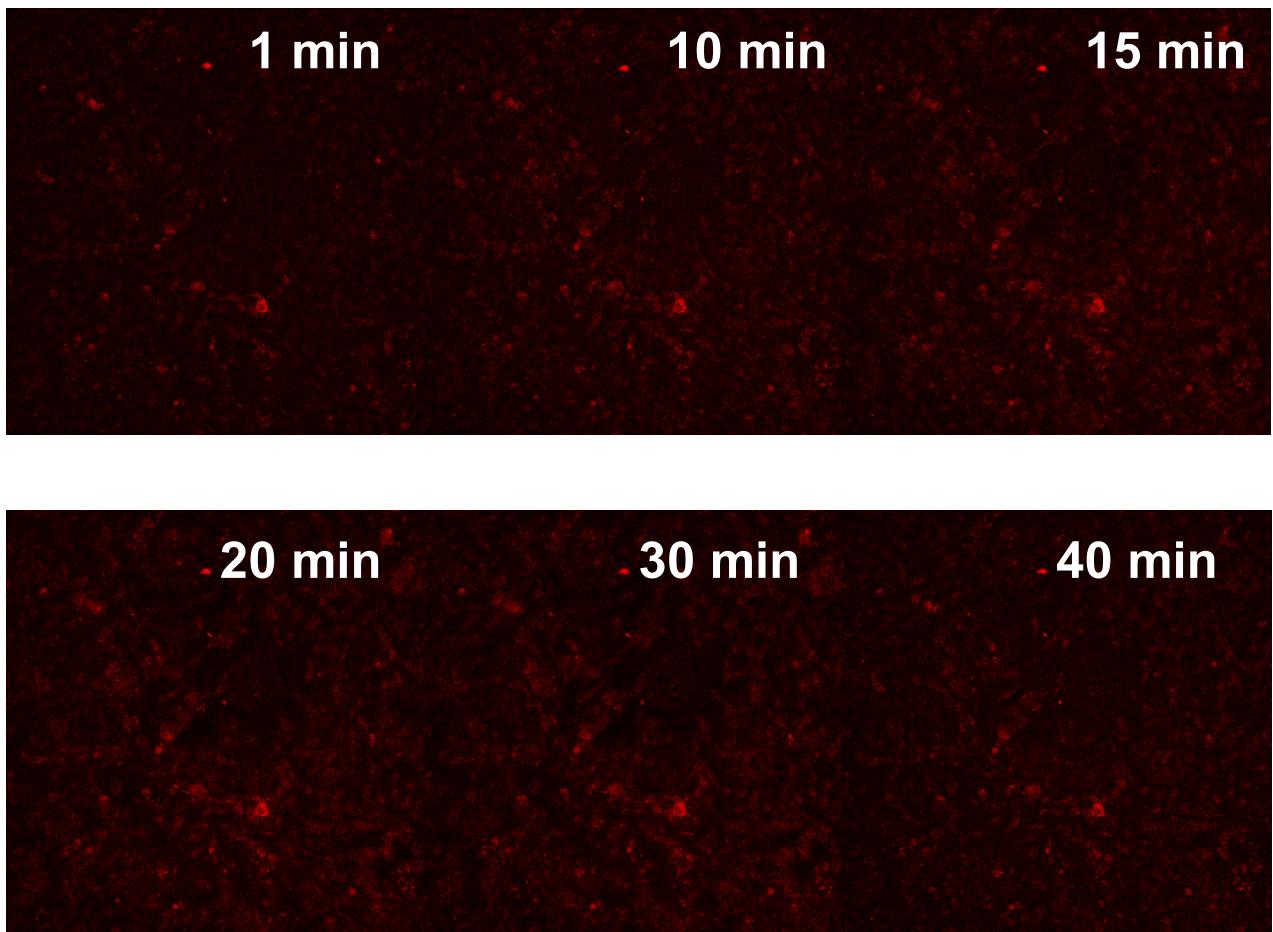

Fig 4 A series of confocal fluorescence images recorded for SKOV-3 cells at different time points during incubation with solution of C6.5-VP in culture medium.

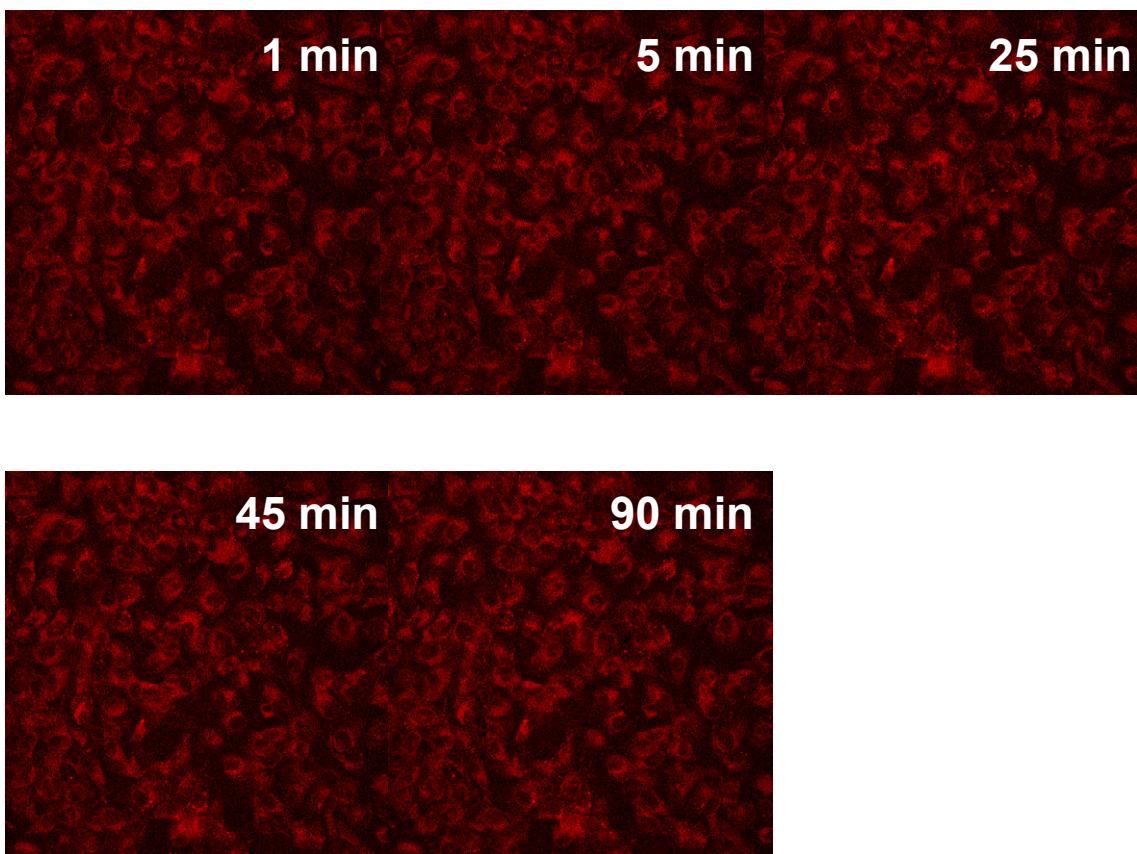

Fig. 5 A series of confocal fluorescence images recorded for SKOV-3 cells at different time points following replacement of solution of C6.5-VP in culture medium with fresh culture medium. Prior to washing and medium change the cells were incubated with C6.5-VP for 30 min.

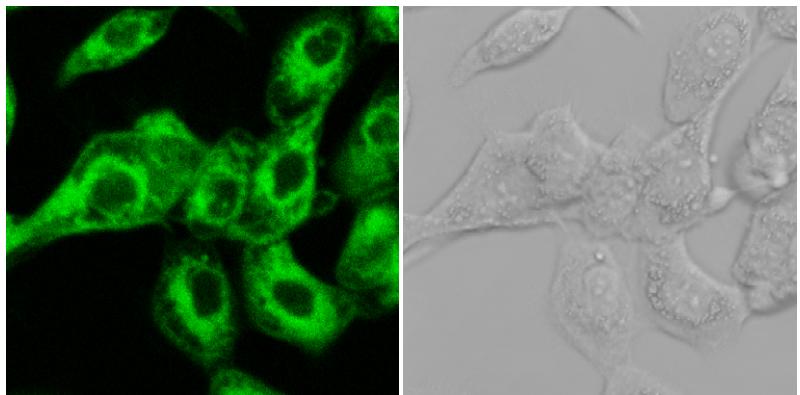

Fig. 6 Confocal fluorescence and transmission images recorded for SKOV-3 cells incubated with free VP for 30 min (650-730 nm detection).
