Materials and Methods

Materials. Solvents for spectroscopic, photophysical and photolysis measurements were of spectroscopic grade, all the other reagents were of reagent grade quality, and used as received.

NMR. ^1H spectra were recorded at 400 MHz on a *Bruker Avance 400 QNP* and at 500 MHz on a *Bruker Avance 500*. All spectra were run at room temperature (298 K) in pyridine- d_5 , acetonitrile- d_3 , dichloromethane- d_2 and chloroform- d_1 . Proton peak positions were referenced to the peak of residual non deuterated solvent.

X-Ray crystallography. Single crystal data of the complex **1** were collected on a *Nonius Kappa CCD* diffractometer using graphite monochromated Mo K α radiation ($\lambda=0.7107\text{\AA}$) at 295 K. Data sets were integrated with the *Denzo SMN* package^[S1] and corrected for Lorentz-polarization and absorption effects.^[S2] The structure was solved by direct methods (SIR97)^[S3] and refined by full-matrix least-squares methods with all non-hydrogen atoms anisotropic and hydrogens included on calculated positions, riding on their carrier atoms. The Cl atoms of the disordered molecule of CHCl₃ were refined over two sites. To increase stability of refinement, a system of restraints to the CHCl₃ geometry was employed.

Because of the presence of an ill-defined region of residual density, the refinement was far from satisfactory. For this reason the program *SQUEEZE* was used to cancel out the effects of the disordered solvent. *SQUEEZE* is part of the *PLATON* program system^[S4] and attempts to remove mathematically the effects of disordered solvent.

All calculations were performed using *SHELXL-97*^[S5] implemented in the *WINGX* system of programs^[S6].

Electrochemical Measurements. Cyclic Voltammetry (CV) measurements were carried out with a PC-interfaced *Eco Chemie Autolab/Pgstat 30* Potentiostat. Argon-purged 10⁻⁴ M sample solutions in THF, containing 0.1 M (TBA)PF₆ (Fluka, electrochemical grade, 99%; dried in an

oven), were used. A conventional three-electrode cell assembly was adopted: a saturated calomel electrode (*SCE Amel*) and a platinum electrode, both separated from the test solution by a frit, were used as reference and counter electrodes, respectively; a glassy carbon electrode was used as the working electrode.

Steady-state Absorption/Emission Measurements. UV-Vis absorption spectra were recorded on a *Jasco V-570 UV/Vis/NIR* spectrophotometer. Emission spectra were taken on a *Horiba-Jobin Yvon Fluoromax-2* spectrofluorimeter, equipped with a *Hamamatsu R3896* tube.

Time-Correlated Single Photon Counting (TCSPC). Fluorescence lifetimes were measured using a TCSPC apparatus (*PicoQuant PicoHarp 300*) equipped with subnanosecond LED sources (280, 380, 460, and 600 nm, 500-700 ps pulselwidth) powered by a *PicoQuant PDL 800-B* variable (2.5-40 MHz) pulsed power supply. The decays were analyzed by means of *PicoQuant FluoFit Global Fluorescence Decay Analysis Software*.

Ultrafast Spectroscopy (UFS). Femtosecond time-resolved experiments were performed using a pump-probe setup based on the *Spectra-Physics Hurricane* Ti:sapphire laser source and the Ultrafast Systems Helios spectrometer.^[S7] The 530 and 550-nm pump pulses were generated with a *Spectra Physics 800 OPA*. Probe pulses were obtained by continuum generation on a sapphire plate (useful spectral range: 450-800 nm). Effective time resolution *ca.* 300 fs, temporal chirp over the white-light 450-750 nm range *ca.* 200 fs, temporal window of the optical delay stage 0-2000 ps. The time-resolved spectral data were analyzed with the *Ultrafast Systems Surface Explorer Pro* software.

Synthesis

Molecular precursors

5-(4'-pyridyl)-10,15,20-triphenylporphyrin. 5-(4'-pyridyl)-10,15,20-triphenylporphyrin was synthesized and purified according to literature methods.^[S8]

[5-(4'-pyridyl)-10,15,20-triphenylporphyrinato] zinc(II). A concentrated CH₂Cl₂ solution of 5-(4'-pyridyl)-10,15,20-triphenylporphyrin was treated overnight with an 8-fold molar excess of Zn(CH₃COO)₂ dissolved in the minimum amount of MeOH. The solution was dried in vacuo and the obtained solid dissolved in CH₂Cl₂. The product was precipitated by addition of *n*-hexane, removed by filtration, washed thoroughly with cold methanol and diethyl ether and vacuumdried (Yield > 85%). ¹H NMR (CDCl₃), δ _H: 8.90 (2H, d, β_4), 8.85 (2H, d, β_3), 8.55 (2H, d, β_2), 8.20 (2H, d, oH'), 8.10 (4H, d, oH), 7.75 (3H, m, mH'+pH'), 7.68 (6H, m, mH+pH), 7.45 (2H, d, β_1), 6.25 (2H, br s, py_{Hb}), 3.45 (2H, br s, py_{Ha}).

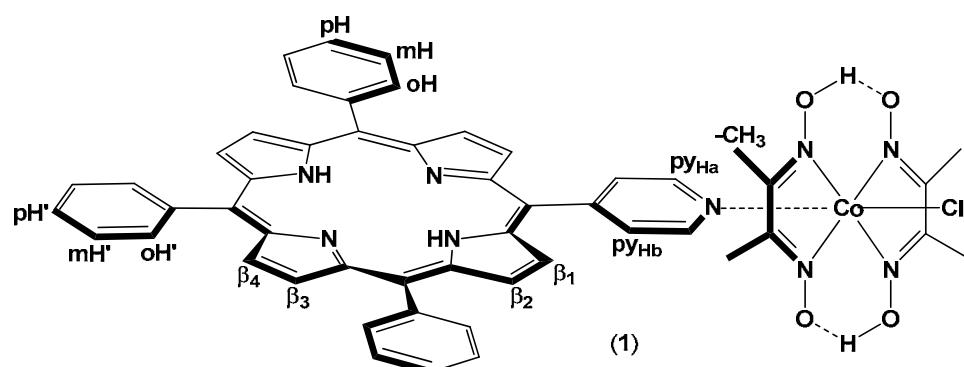

[5-(4'-pyridyl)-10,15,20-(3,5-di-*tert*-butyl)-triphenylporphyrinato-hydroxo] aluminum(III).^[S9] 300 mg (2.82 mmol) of 5-(4'-pyridyl)-10,15,20-(3,5-di-*tert*-butyl)-triphenylporphyrin were dissolved in 100 ml of dry toluene and 0.2 ml of trimethylaluminium (2.0 M in toluene, 5.6 mmol) were added under N₂ atmosphere. The solution was stirred at room T, under N₂ atmosphere, for 4 hr, at which time 5 ml of H₂O were added and stirring was continued overnight. The toluene was removed and the violet solid thus formed was redissolved in CH₂Cl₂. The solution was filtered dried over Na₂SO₄ and passed over a column of alumina to give 265 mg of product (85%). ¹H NMR (pyridine-*d*₅), δ _H: 9.28 (6H, m, β_4 + β_3 + β_2), 9.12 (4H, m, β_1 + py_{Ha}), 8.2 (6H, br d, oH+oH'), 8.15 (2H, d, py_{Hb}), 7.84 (3H, d, br, pH+pH'), 1.54 (s, *t*Bu), 1.52 (s, *t*Bu).

Chloro(acquo)bis(dimethylglyoximate) cobalt(III). Co(dmgH)₂Cl(H₂O) was synthesized according to literature procedures.^[S10] 1.10 g of CoCl₂.6H₂O (5 mmol) and 1.18 g of dmgh₂ (dimethylglyoxime, 11 mmol) were dissolved in 50 ml of 95% ethanol, and heated at 70°C. 5 ml of

a 1 M NaOH solution (5 mmol) were then added to the whole mixture and the solution was stirred for 1 hr at 70°C. After cooling at room temperature, a stream of air was blown through the solution for 30 min. The solution was filtered to remove side-reaction products and concentrated under vacuum to allow precipitation. The so obtained brown solid was collected by filtration on a Büchner funnel and washed with 5 ml water and then with 10 ml diethyl ether. The solid was then dried at room temperature to yield 590 mg of product (35%). ^1H NMR (acetonitrile- d_3), δ_{H} : 18.40 (2H, br s, OH_O), 2.45 (12H, s, CH₃).

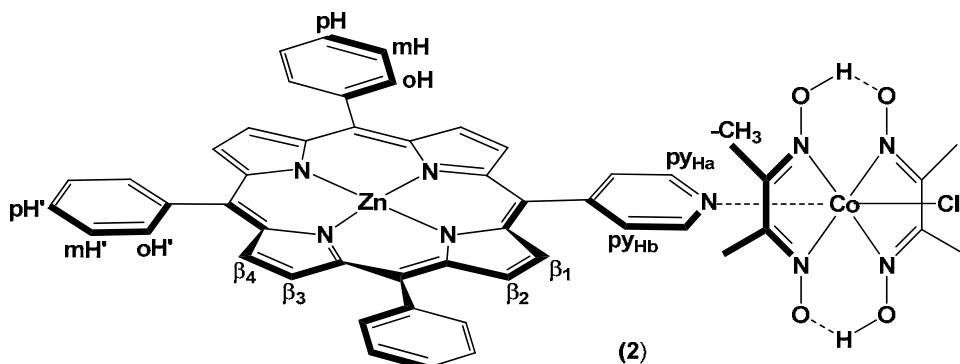

Molecular dyads 1-3

{5-(4'-pyridyl)-10,15,20-triphenylporphyrin}chloro bis(dimethylglyoximate) cobalt(III) (1). 49.2 mg (0.08 mmol) of 5-(4'-pyridyl)-10,15,20-triphenylporphyrin were dissolved in 400 ml of a 1/5 CH₃CN/CH₂Cl₂ mixture and 101.2 mg (0.32 mmol) of Co(dmgH)₂Cl(H₂O) were added to the solution under continuous stirring. The reaction mixture was left stirring for 1 hr at room temperature, and then concentrated to allow precipitation; the violet solid was collected by filtration on a Büchner funnel and washed with 10 ml diethyl ether to yield 55.2 mg of **1** (73%). ^1H NMR (CD₂Cl₂), δ_{H} : 18.65 (2H, br s, OH_O), 8.93 (6H, m, py_{Ha}+ β_3 + β_4), 8.70 (2H, d, β_2), 8.66 (2H, d, β_1), 8.24 (6H, m, oH+oH'), 8.16 (2H, d, py_{Hb}), 7.84 (9H, m, mH+mH'/pH+pH'), 2.60 (12H, s, CH₃), -2.85 (2H, s, NH).

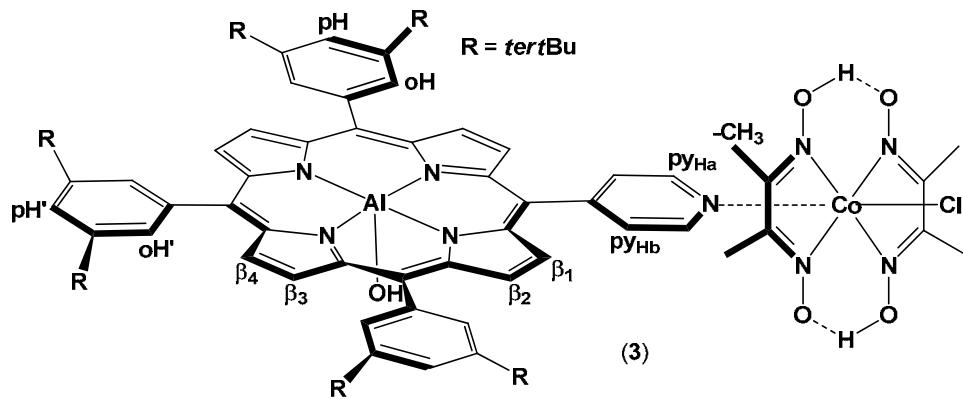

{[5-(4'-pyridyl)-10,15,20-triphenylporphyrinato] zinc(II)} chloro bis(dimethylglyoximate)

cobalt(III) (2). 22.3 mg (0.03 mmol) of [5-(4'-pyridyl)-10,15,20-triphenylporphyrinato] zinc(II) were dissolved in 190 ml 1/5 CH₃CN/CH₂Cl₂ mixture and 41.5 mg (0.12 mmol) of Co(dmgH)₂Cl(H₂O) were added to the solution under continuous stirring. The reaction mixture was left stirring for 1 hr at room temperature, and then concentrated to allow precipitation. The violet solid was collected by filtration on a Büchner funnel and washed with 10 ml diethyl ether to yield 23.4 mg of **2** (71%). ¹H NMR (CD₂Cl₂), δ _H: 18.65 (2H, br s, OH_O), 9.00 (6H, m, $\beta_2 + \beta_3 + \beta_4$), 8.78 (2H, d, β_1), 8.63 (2H, d, py_{Ha}), 8.23 (6H, m, oH+oH'), 8.16 (2H, d, py_{Hb}), 7.82 (9H, m, mH+mH'/pH+pH'), 2.60 (12H, s, CH₃).

{[5-(4'-pyridyl)-10,15,20-(3,5-di-*tert*-butyl)-triphenylporphyrinato-hydroxo]

aluminum(III)}chloro bis(dimethylglyoximate) cobalt(III) (3). 30 mg (0.03 mmol) of [5-(4'-pyridyl)-10,15,20-(3,5-di-*tert*-butyl)-triphenylporphyrinato-hydroxo] aluminum(III) were dissolved in 190 ml 1/5 CH₃CN/CH₂Cl₂ mixture and 41.1 mg (0.12 mmol) of Co(dmgH)₂Cl(H₂O) were added to the solution under continuous stirring. The reaction mixture was left stirring for 1 hr at room temperature, and was then concentrated to allow precipitation. The violet solid was collected by filtration on a Büchner funnel and washed with 10 ml diethyl ether to yield 21.7 mg of **3** (55%). ¹H NMR (CD₂Cl₂), δ _H: 18.4 (2H, br s, OH_O), 9.00 (8H, m, $\beta_2 + \beta_3 + \beta_4 +$ py_{Ha}), 8.69 (2H, d, β_1), 8.10 (8H, m, oH+oH'+py_{Hb}), 7.78 (3H, m, pH+pH'), 2.45 (12H, s, CH₃), 1.65 (m, *t*Bu).

Molecular models 4-6

5,10,15,20-tetraphenylporphyrin (4), [5,10,15,20-tetraphenylporphyrinato] zinc(II) (5), and 5,10,15,20-(3,5-di-*tert*-butyl)-tetraphenylporphyrinato-hydroxo} aluminum(III) (6) were prepared with the same experimental procedures reported before for the monopyridyl porphyrin analogues (*vide supra*).

Chloro(4-ethylpyridine)bis(dimethylglyoximate) cobalt(III). Co(dmgH)₂Cl(EtPy) was synthesized according to literature procedures.^[S10]

X-ray molecular structure of dyad 1 and cristallographic data

Empirical formula	$C_{51}H_{43}ClCoN_9O_4 \cdot CHCl_3$	
Formula weight	1059.69	
Temperature	295 K	
Wavelength	0.71073 Å	
Crystal system	Monoclinic	
Space group	$P2_1/c$	
Unit cell dimensions	$a = 20.2161(3)$ Å	$\alpha = 90^\circ$
	$b = 12.5775(2)$ Å	$\beta = 99.3737(6)^\circ$
	$c = 20.8200(4)$ Å	$\gamma = 90^\circ$
Volume	$5223.2(2)$ Å ³	
Z	4	
Crystal size	0.17 x 0.29 x 0.36 mm ³	
Theta range for data collection	3.58 to 26.00°.	
Index ranges	$-24 \leq h \leq 24$, $-14 \leq k \leq 15$, $-25 \leq l \leq 25$	
Reflections collected	19016	
Independent reflections	10202 [R(int) = 0.0231]	
Completeness to theta = 26.00°	99.3 %	
Absorption correction	Semi-empirical from equivalents	
Max. and min. transmission	0.895 and 0.807	
Refinement method	Full-matrix least-squares on F ²	
Data / restraints / parameters	10202 / 15 / 658	
Goodness-of-fit on F ²	1.104	
Final R indices [I>2sigma(I)]	R1 = 0.0631, wR2 = 0.1899	
R indices (all data)	R1 = 0.0825, wR2 = 0.2067	
Largest diff. peak and hole	0.620 and -0.612 e.Å ⁻³	
CCDC Deposition No.	944790

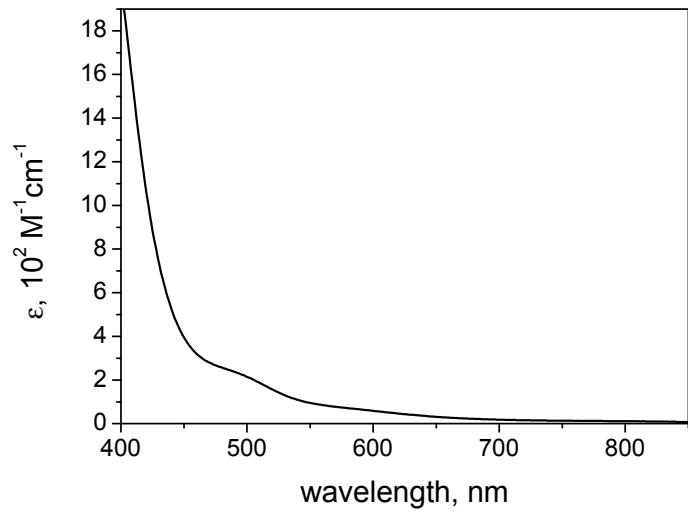

Figure S4. Absorption spectrum of model compound $\text{Co}(\text{dmgH})_2\text{Cl}(\text{EtPy})$ in THF.

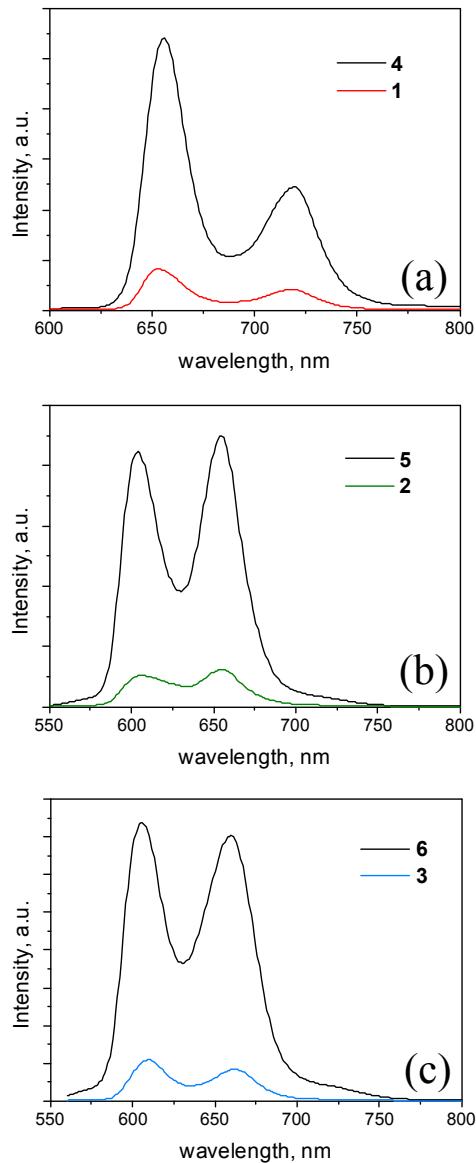

Figure S5. Comparison of emission spectra in THF (ca. 1×10^{-5} M) of optically matched solutions at the excitation wavelength of (a) **1** and **4** (excitation at 530 nm), (b) **2** and **5** (excitation at 530 nm), and (c) **3** and **6** (excitation at 550 nm).

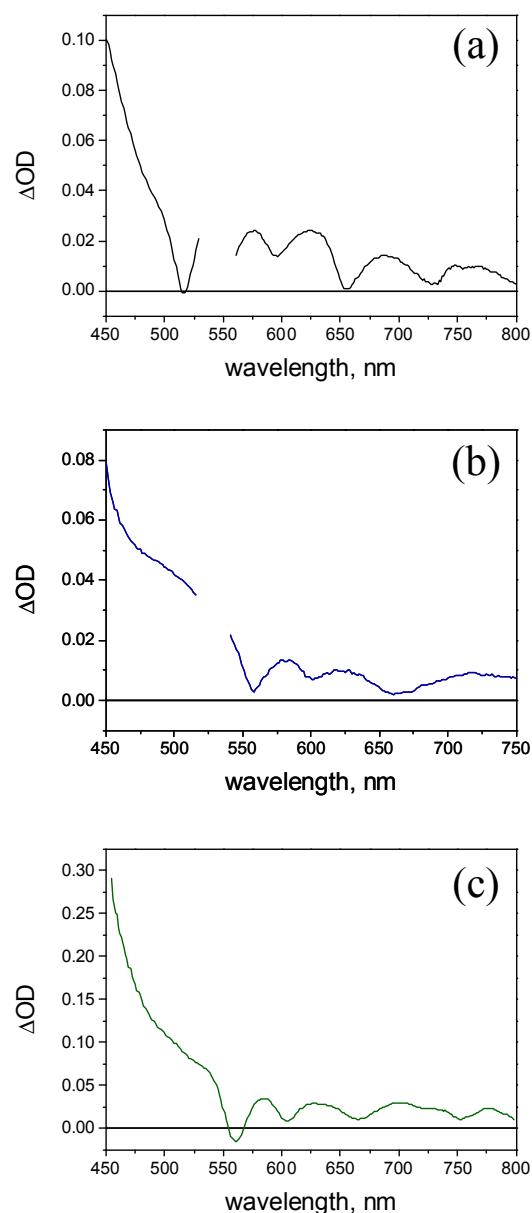

Figure S6. Excited singlet state difference absorption spectra obtained by Ultrafast Spectroscopy in THF on the molecular models (a) **4** (excitation at 550 nm), (b) **5** (excitation at 530 nm), and (c) **6** (excitation at 550 nm).

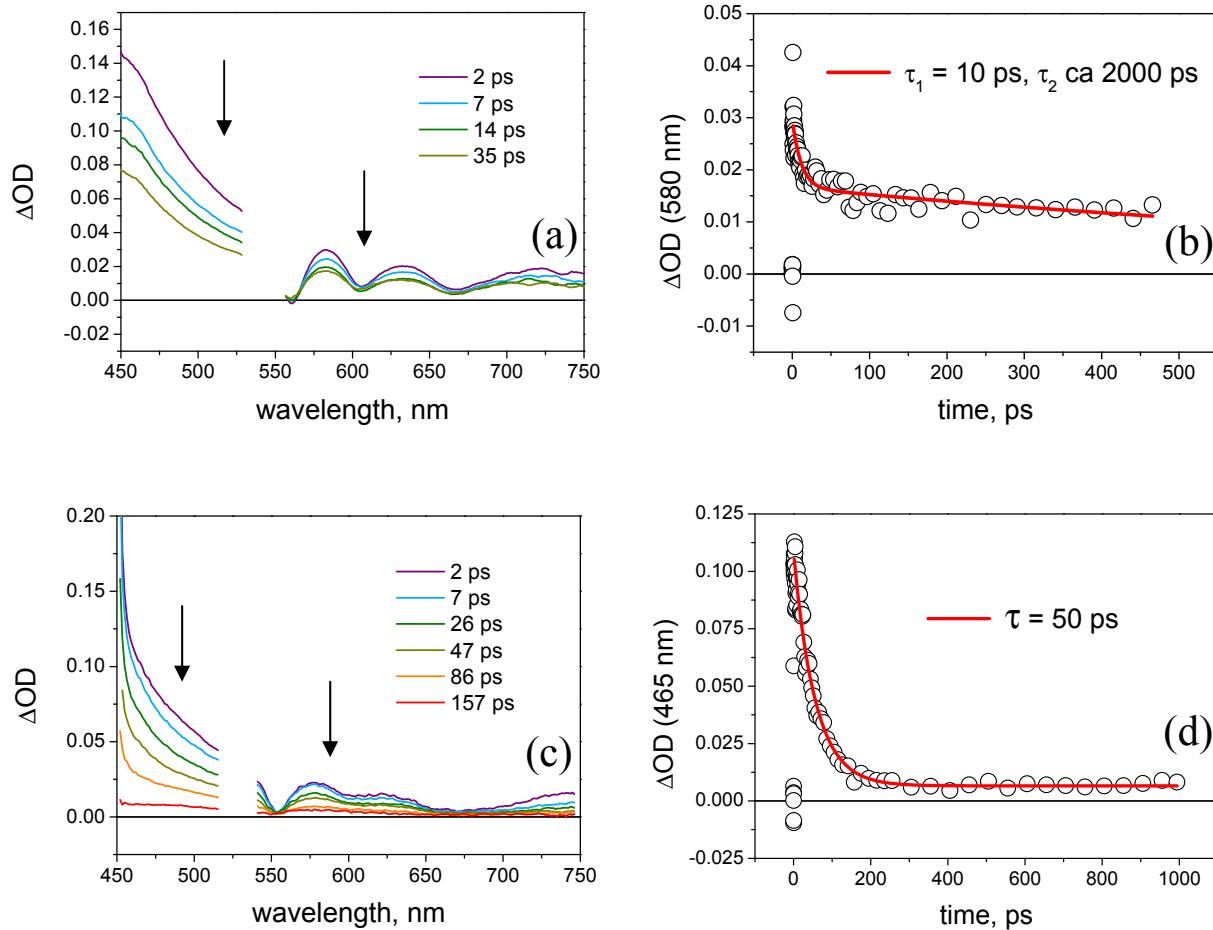

Figure S7. (a) Difference absorption spectra obtained by ultrafast spectroscopy in DMF for **2** (excitation at 550 nm), (b) kinetic analysis at 580 nm and relative fitting; (c) difference absorption spectra obtained by ultrafast spectroscopy in toluene for **2** (excitation at 530 nm), (d) kinetic analysis at 465 nm and relative fitting.
