## Experimental Section

### General

All reactions were run in oven-dried flasks under air. Unless otherwise noted, reagents were commercially available and were used without purification. <sup>1</sup>H NMR (400MHz) and <sup>13</sup>C NMR (100 MHz) spectra were recorded on a Bruker Avance 400 spectrometers in CDCl<sub>3</sub> [using (CH<sub>3</sub>)<sub>4</sub>Si (for <sup>1</sup>H, δ = 0.00; for <sup>13</sup>C, δ = 77.00) as internal standard]. The following abbreviations were used to explain the multiplicities: s = singlet, d = doublet, t = triplet, m = multiplet. High-resolution mass spectra were obtained with a Waters Q-TOF mass spectrometer. Melting points were recorded on a Buchi B-54 melting point apparatus and are uncorrected.

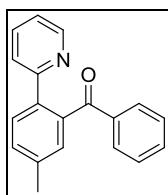

### General Experimental Procedures and Characterizations

2-arylpyrdine (0.5 mmol), toluene derivatives (1.0 mmol), Pd(OAc)<sub>2</sub> (0.01 mmol), TBHP (1.5 mmol, 70% aq.) and DMSO (0.5 mL) were added in a 25 mL seal tube with a Teflon lined cap. The mixture was heated at 90 °C (oil bath temperature) for 24 h. After cooling to room temperature, the volatiles were removed under reduced pressure, and the residue was purified by a flash column chromatography on silica gel using hexane/ethyl acetate as eluent to give the corresponding product.
