

† Electronic supplementary information (ESI)

HSPs of the mixtures were calculated by:

$$\delta_x = \sum_{i=1}^n a_i \cdot \delta_{i,x}$$

Where δ_x is a partial solubility parameter component of a mixture, n , number of solutions in the mixture, a_i , volume fraction of a solvent in the mixture and $\delta_{i,x}$ represents a partial solubility parameter component of a solvent in the mixture.
