General information

All chemicals used in the experiments were obtained from commercial resource and used without further purification. Solvents used as eluent in the chromatography were distilled prior to use. The ¹H and ¹³C NMR were recorded in 400 MHz apparatus using CDCl₃, chemical shifts were reported in ppm relative to the CDCl₃ as internal standard. HMRS were tested under ESI model in a spectrometer equipped with TOF analyzer. And melting points were analyzed in an X-4A apparatus without temperature correction.
